

At this workshop, we are presenting conceptual options to improve the intersection of Pennsylvania Avenue with Union Street. These options have been developed to achieve a number of goals:

- Improve pedestrian safety and the accessibility of sidewalks
- Improve accessibility of transit stops
- Improve connectivity for bicyclists
- Address the impact of the proposed development at 2000 Pennsylvania Avenue
- Evaluate current and proposed conditions for vehicular traffic

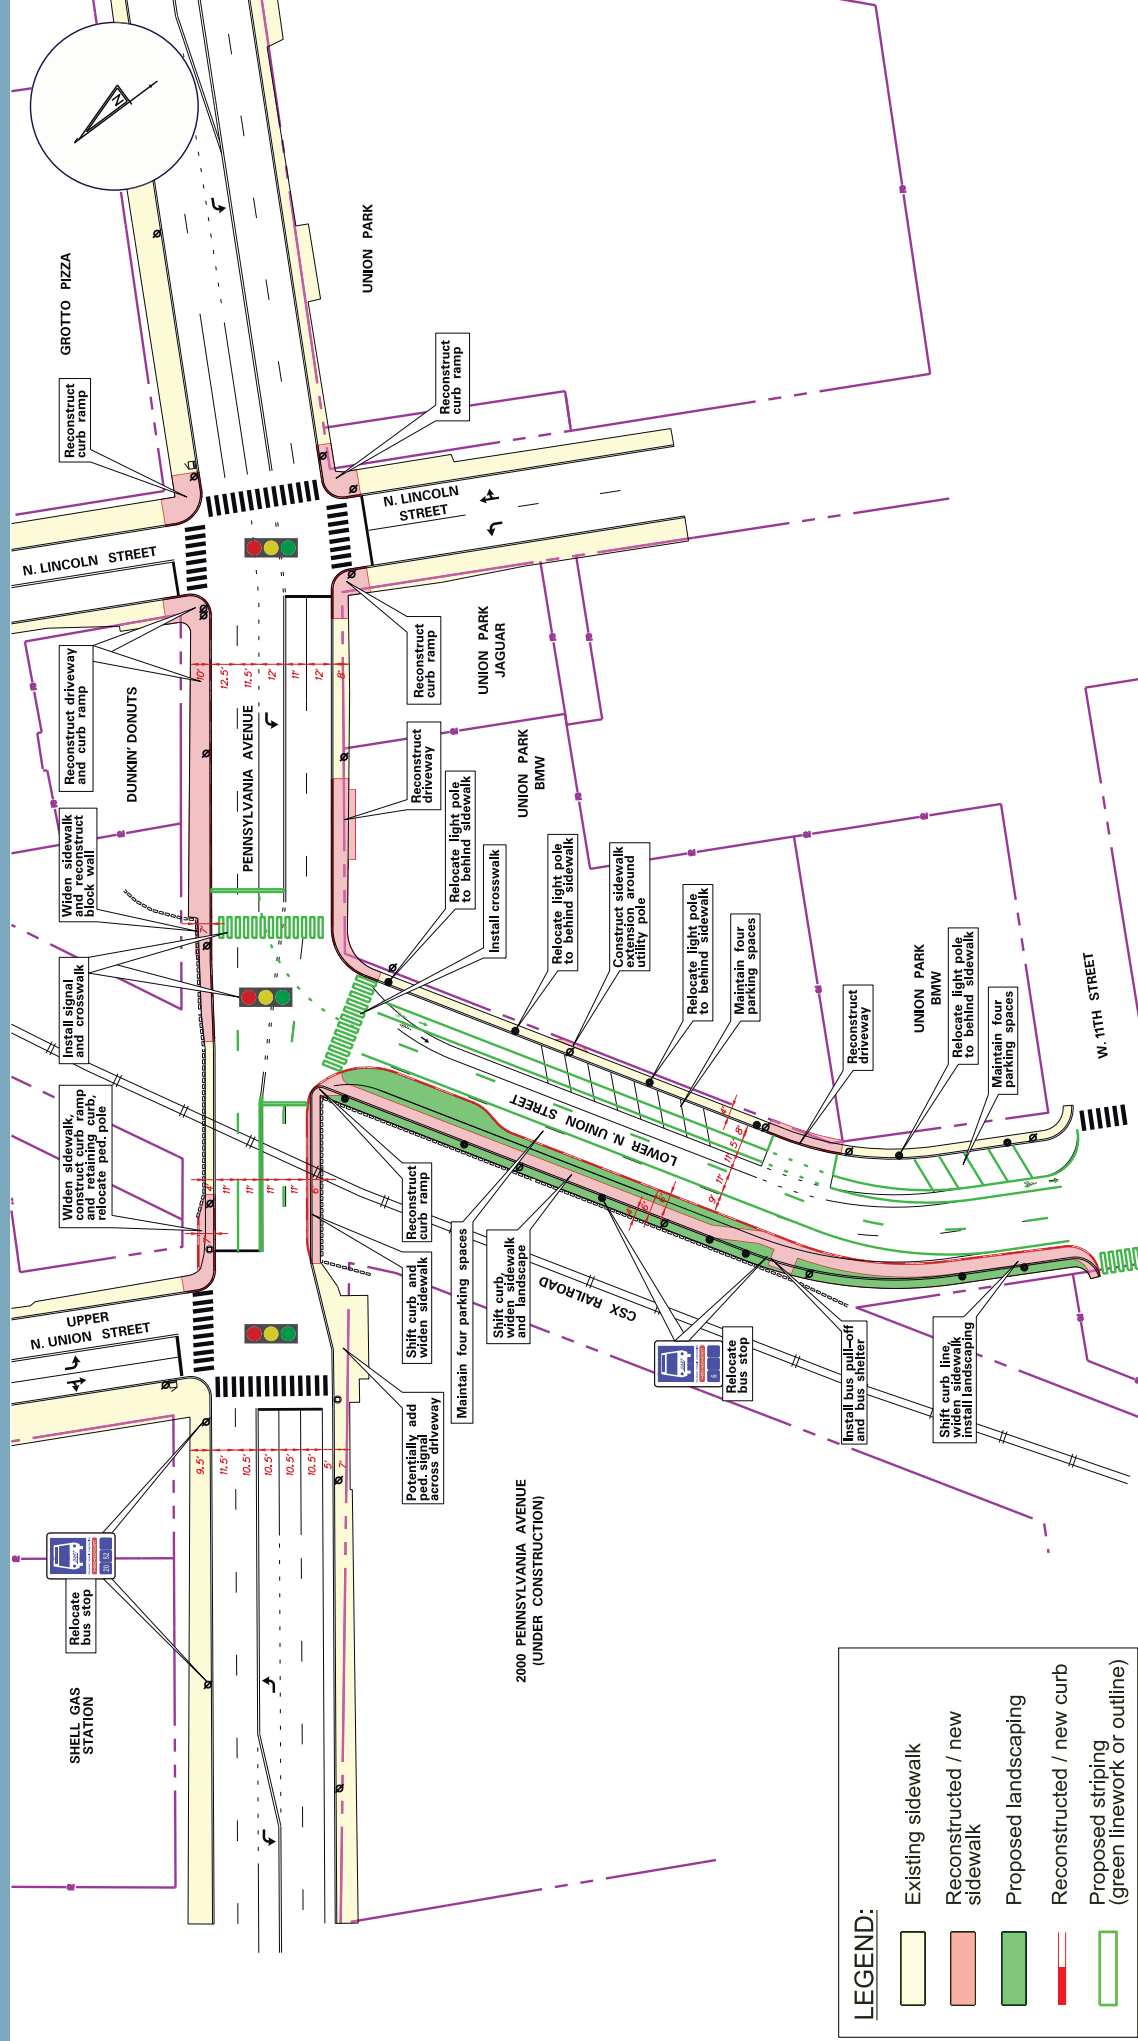

By addressing these goals, the City intends to create a fully connected, accessible, and welcoming pedestrian environment, while also improving safety for all modes of travel. These improvements will provide safer access to destinations along Pennsylvania Avenue as well as Little Italy and other nearby neighborhoods.

This is a conceptual study. Once an alternative is selected funding must be identified, and design plans prepared, before construction can begin. We don't know how long that will take, but we will continue to keep the public updated as the project progresses.
