INTRODUCTION

Who is WILMAPCO?

The Wilmington Area Planning Council (WILMAPCO) is the Metropolitan Planning Organization (MPO) for Cecil County, Maryland and New Castle County, Delaware. We are charged with planning and coordinating this region's transportation investments.

What is the Regional Transportation Plan?

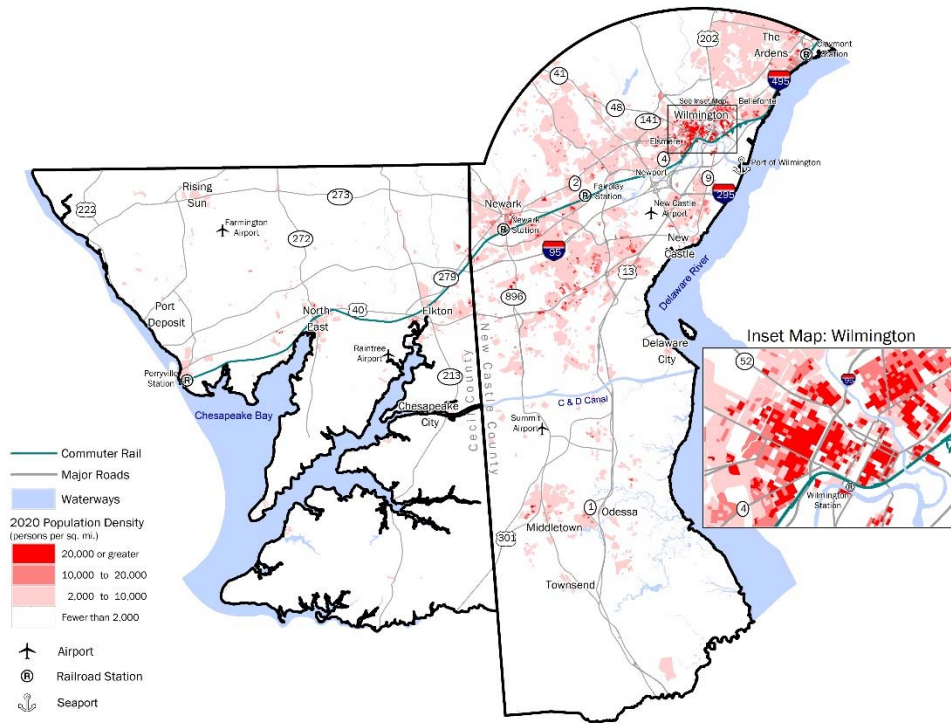

The Regional Transportation Plan (RTP) identifies our region's long-term transportation needs and the projects and activities that address them. The RTP extends through at least two decades, and the projects it calls for are financially reasonable (based on anticipated revenues) and meet air quality standards. Only transportation projects found in the RTP are eligible for federal funding. It is a living Plan, subject to continual revision (at least every four years), and, generally, a tool for informed transportation and policy decisions.

WILMAPCO's first RTP was published in 1996. The present document is the seventh update to that original Plan.

This iteration of the RTP is broken into six sections. These include: the introduction; a section devoted to the status of the existing transportation system; another section which considers the successes and challenges of realizing our previous RTP; a section with our goals, objectives, actions, and performance measures; another section outlining available funding, and a listing of transportation projects; and a final section describing the development of this Plan. An appendix houses more details and background information.

² 11% of the region's jobs were in financial activities in 2016-20, compared to 7% nationally. Source: American Community Survey.

Population Density³

A century of suburban sprawl (supported by highway building) has produced a transportation system where private vehicles are the dominant, and growing, means of travel. Land and transportation policies -- combined with affordable fuel and private vehicles -- enabled the dispersion of population and jobs from the City of Wilmington. In 1920, more than seven in ten New Castle County's residents lived within that city. Today it is about one in ten.

Most trips in the region are completed in private cars. These vehicles, and our increasingly advanced highways, provide fast and efficient mobility to most of our region's residents and visitors. The high financial expenses associated with cars, however, put them out of reach for those with limited means, and often burden household budgets of working families forced into car ownership. Our low-density development pattern makes carpooling, public transit, and walking and bicycling often difficult and sometimes impossible.

³ Source: 2020 Census.

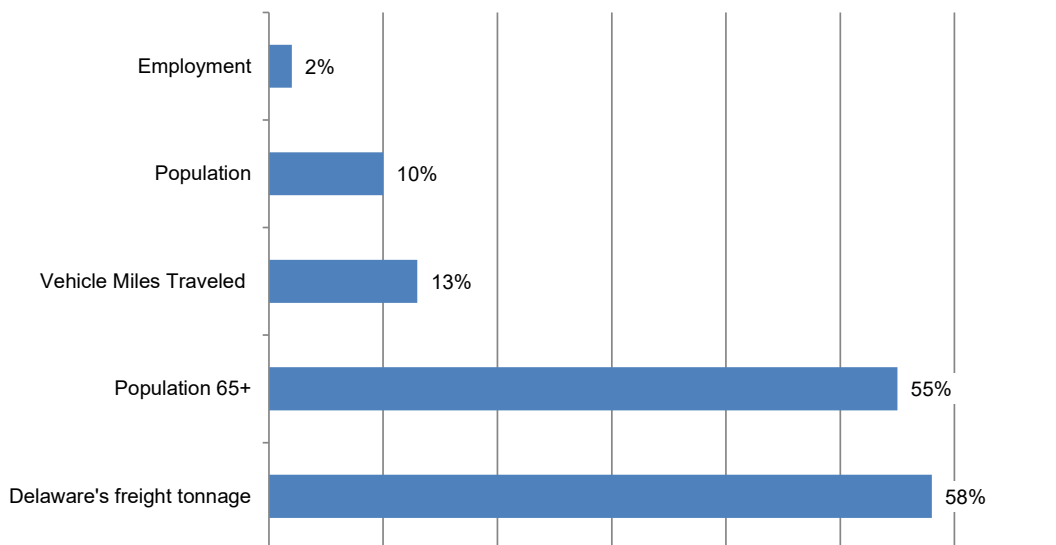

The presence of I-95, together with the seaport and industrial uses along and nearby the coast, and our prevailing consumer culture, generate freight traffic. These goods are hauled on the backs of trucks, in rail cars and in cargo ships. Most of the material is just passing through, destined for other regions. Much of the inbound and outbound traffic involves building materials, food, petroleum/coal, and chemicals.

KEY SUCCESSES AND CHALLENGES

What will our region look like by 2050? For one thing, we can expect a 10% increase in population. While little growth in the number of jobs is expected, given our aging population (including 55% more seniors by 2050), net population growth will stress our transportation system. So too will a projected 58% rise in freight tonnage, and a rise in Vehicle Miles Traveled (VMT).

Our RTPs have long taken aim to address these expected changes. And we have had success implementing many of our previous actions and projects. We track our success and make sure our recommendations are on point through the data-driven Regional Progress Report and the Public Opinion Survey, a scientific sample of resident opinion on matters of transportation quality and policy.

Selected Regional Projections through 2050⁴

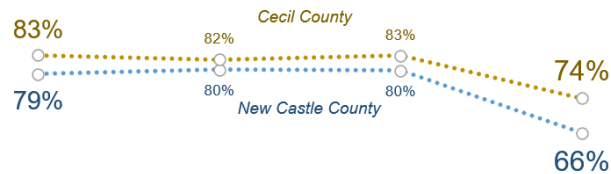

⁴ Delaware's freight tonnage reflects a statewide figure from the 2022 Delaware State Freight Plan. Vehicle Miles Traveled projections were developed based on data from recent air quality conformity analyses, courtesy of DelDOT and MDOT. They reflect the regional increase expected from 2025 to 2050. The other demographic trends were developed by combining New Castle County and Cecil County data from the Delaware Population Consortium and the Maryland Office of State Planning. Figures for final year of population and jobs data for Cecil County reaches were extrapolated from 2045 and 2040 projections, respectively.

Successes

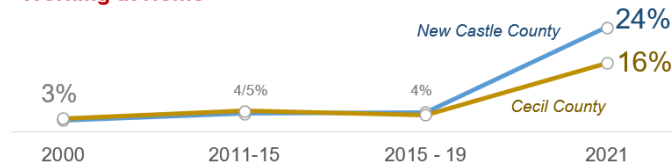

A silver lining of the Coronavirus pandemic, single occupancy vehicle trips are down for the first time in decades. While about 8 in 10 workers drove alone to work prior to the pandemic, today it is about 7 in 10. The key driver has been sharp increases in the percentage of workers working from home. Before the pandemic, only 4% of regional workers worked from home. That figure jumped to 16% in Cecil County and 24% in New Castle County in 2021. Fewer cars on the road have also help ease regional congestion⁵.

Selected Means of Transportation to Work, WILMAPCO Region⁶

Driving Alone

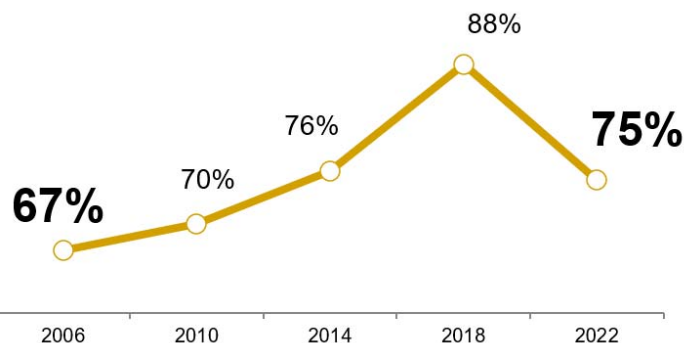

Working at Home

Perhaps the single best measure of our success is how well residents say the system meets their travel needs. Three out of four of region's residents say the transportation system meets their needs.

Travel Needs are Well Met⁷

⁵ See Peak Hour Excessive Delay figures in the 2022 CMAQ Performance Plan: http://www.wilmapco.org/Aq/2022_CMAQ_PP_9_22.pdf

⁶ Census 2000 and American Community Surveys.

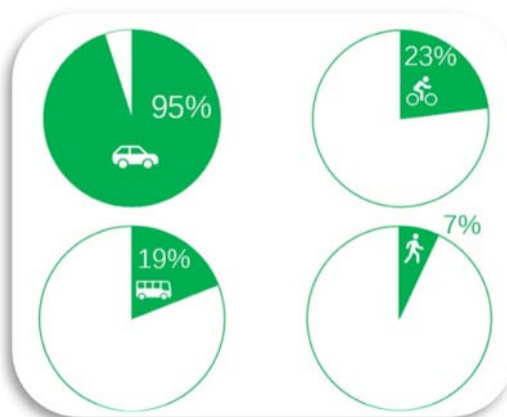

⁷ WILMAPCO Public Opinion Surveys: 2006, 2010, 2014, and 2018.

Challenges

Continuing suburban sprawl, stubbornly high vehicle crash rates, and enduring social inequities are a few of the key challenges facing the region today. Transportation and land use policies have long supported growth in places with little existing infrastructure. Subsequently, few places in the region boast good bus, bicycle, and walking connections between homes and everyday destinations. More sprawl means more driving. And after posting sharp declines during the first half of the 21st Century, vehicle injury and fatality rates have risen during the last few years.

Societal inequities by race and class are replicated in our transportation system. Our public opinion survey, for example, shows that difficulty utilizing the transportation system increases as income decreases. Twenty percent of those living in households earning less than \$25,000 a year reported transportation difficulty reaching healthy and affordable foods, compared to only 4% of those living in households earning more than \$100,000 a year.

Composite Connectivity from Homes to Destinations, WILMAPCO Region, 2019⁸

Transportation Difficulty Reaching Healthy and Affordable Grocery Shopping⁹

PLANNING FOR TOMORROW

This section of the RTP presents the goals, objectives, and actions we propose to meet the transportation challenges during the next 25 years. We have three broad, overlapping goals: Support Sustainable Economic Development and Goods Movement, Efficiently Transport People, and Improve Quality of Life.

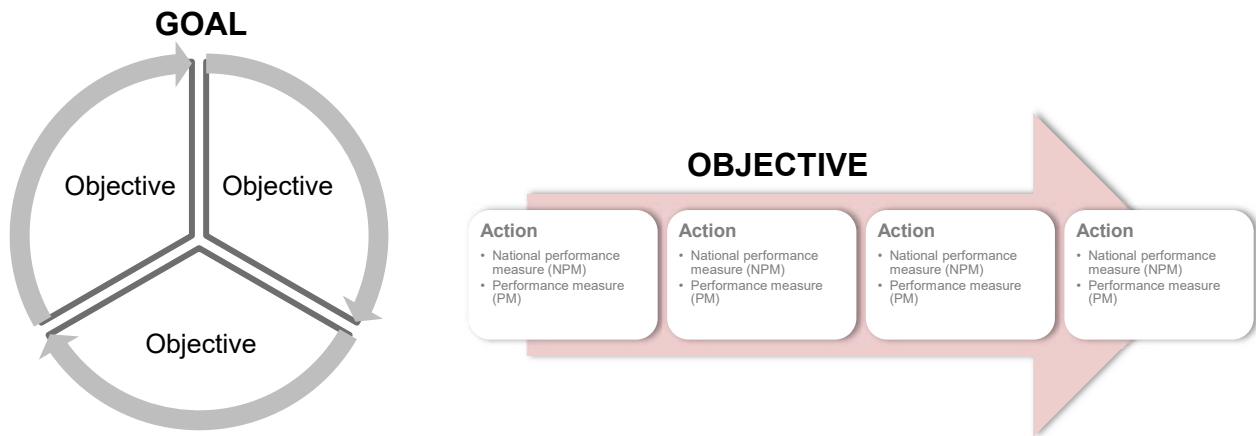

Within the goals are objectives and within the objectives are actions. The RTP is not structured in a hierarchy. In other words, the achievement of one goal/objective/action is just as important as the next. In fact, many objectives and actions could just as easily fit underneath a different goal than what is identified here.

The actions are the most crucial elements of this section. They will inform planning activities at WILMAPCO, and the projects we seek to implement during the next several years. Our successes and failures in realizing these actions will be tracked, with the performance measures identified in this section.

We will show two classes of performance measures – National Performance Measures (NPM) required of MPOs and Performance Measures (PM). We nest the required NPMs inside actions where we feel they will be best addressed. However, not all actions will be associated with an NPM. While not required, PMs dig deeper into the source of an action's performance. How well we do in meeting our actions and performance measures will inform the next update of our RTP, due in four years' time.

The graphics below illustrates how each objective, action, and potential performance measure will be illustrated in this section.

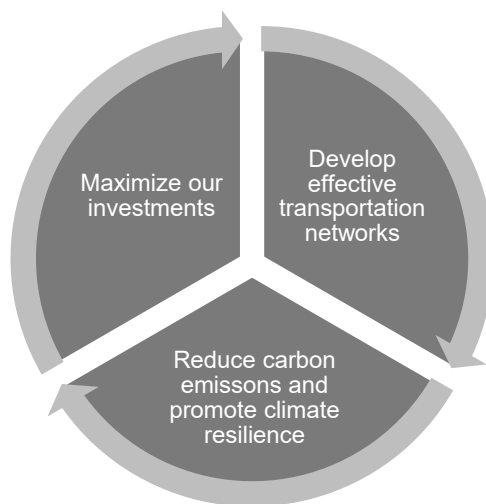

Interspersed throughout the section are relevant public opinions, along with callout boxes containing more details on specific points.

Goal: Support Sustainable Economic Development and Goods Movement

Transportation can help or hinder economic development. A transportation system which efficiently moves freight and workers maximizes economic development potential, while one that leads to chronic traffic problems slows economic activity. Simultaneously that system must be planned and built wisely to lessen and withstand the stresses of climate change, such as increased heat, sea level rise, and more chronic flooding. These interwoven challenges impact our long-term economic development potential.

Ensuring that we get the most out of each transportation dollar invested, developing effective transportation networks, and reducing our dependence on oil while planning to reduce and adapt to environmental impacts will make for a stronger and more sustainable economy in the decades ahead.

SUPPORT SUSTAINABLE ECONOMIC DEVELOPMENT AND GOODS MOVEMENT

MAXIMIZE OUR INVESTMENTS

Encourage increased density and future growth in Center and Core TIAs

- PM: HH and employment growth by TIA; TIP spending by TIA; % of location efficient places; demographic projections and TIP spending Center vs. Rural TIAs

Use WILMAPCO's project prioritization process to select projects for TIP funding

- PM: projects in current TIP vs. unfunded projects, by technical score

Support the examination of additional and sustainable funding sources for transportation projects

- PM: alternative funding sources secured; VMT alternative tax support; review UPWP

Create and support the implementation of subregional plans

- PM: implementation progress of subregional plans; qualitative review of UPWP

Support municipalities and existing communities

- PM: summarize recommendations of local plans; qualitative review of UPWP

Ensure data developed in transportation studies are publicly accessible

- PM: unique study and plan data are publicly accessible

Public Opinion

72% SUPPORT creating new fees for developers or those who benefit to pay for transportation improvements

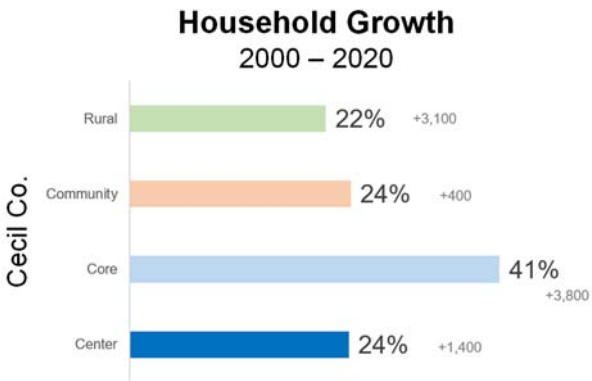

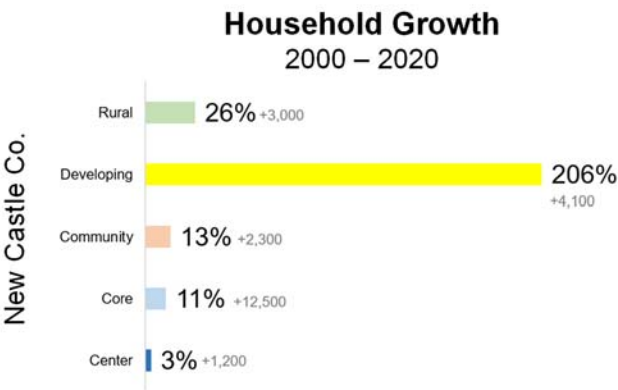

Spotlight: Developer Supported Projects

New to the RTP project list is funding to support the implementation of Transportation Improvement Districts (TID). A TID is a place where land use and transportation is planned in detail in advance, such that development consistent with that planning can pay a readily determined fee and forego the Traffic Impact Study process. TIDs, developed in a partnership between local government and DeIDOT, provide the transportation improvements needed to support land development. Coordinating land use and transportation can lower infrastructure costs and foster planning for market-ready development / redevelopment opportunities. As a transportation-based impact fee, TIDs equitably distribute the cost of transportation improvements triggered by development-related growth to the private sector benefiting from the facilities. TIDs are established for southern New Castle County and the Eastown and Westown areas of Middletown. DeIDOT and the City of Newark are working together to develop a TID with more areas under consideration. Learn more at <https://deldot.gov/Programs/transportation-improvement-districts>.

Source: Middletown Transcript, Amanda Parrish

Performance Measurement

DEVELOP EFFECTIVE TRANSPORTATION NETWORKS

Manage congestion

- NPM: % of the interstate system providing reliable travel times; % of the non-interstate NHS providing reliable travel times; % of the interstate system where peak hour travel times meet expectations; % of the non-interstate NHS where peak hour travel times meet expectations; annual hours of excessive delay per capita
- PM: Maintain CMS analysis; integrate CMS into TIP (management and expansion TIP projects vs. CMS corridors)

Streamline freight movement

- NPM: % of the interstate system mileage providing for reliable truck travel times
- PM: Maintain a Statewide Freight Plan; (management and expansion TIP projects vs. freight bottlenecks); achieve Freight Plan goals

Enhance intermodal systems connectivity

- PM: qualitative review of UPWP

Promote seamless interregional travel

- PM: Maintain an Interregional Report; status of major interregional projects

Public Opinion

84% say building new roads is not the best long-term solution to traffic congestion

Spotlight: Delaware Freight Plan

WILMAPCO joined other stakeholders to support DelDOT's creation of the Delaware Freight Plan in 2022. The Plan assesses freight transportation system details, needs, and opportunities in order to identify key projects, strategies, and other planning-related actions that will maximize the efficiency and reliability of Delaware's current and projected freight transportation networks with a focus on five overarching freight goals related to:

- Safety and Security
- Economic Vitality
- Freight Connectivity, Accessibility, and Mobility
- System Management, Operations, and Maintenance
- Resilience, Sustainability, and Environmental Stewardship

An interactive map of Delaware's freight projects may be viewed online here:

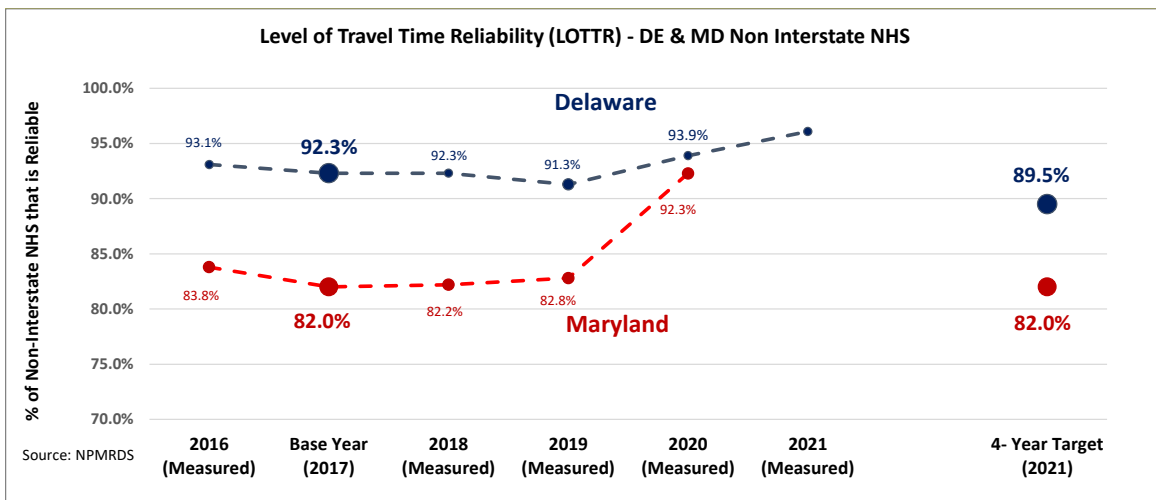

<https://mangomap.com/wilmapco/maps/107459/de-freight-project-draft-list#>

Source: DelDOT, 2020

Performance Measurement

Travel Time Reliability: Delaware and Maryland Non-Interstate National Highway System

REDUCE CARBON EMISSIONS AND PROMOTE CLIMATE RESILIENCE

Reduce VMT

- NPM: % of Philadelphia regional non-SOV trips
- PM: % of WILMAPCO region non-SOV trips; per capita VMT target (10% reduction between 2020 and 2030)

Support clean vehicle infrastructure, fuels, and technology

- PM: number of public EV charging stations; Transportation GHG Emission Analysis; qualitative review of UPWP

Adapt to sea level rise, storm flooding, and other environmental challenges

- PM: SLR vulnerability vs. planned projects; funded TIP projects potentially impacted by SLR; qualitative review of UPWP

Public Opinion

66% do not support replacing a fuel tax with a tax on VMT to pay for transportation improvements

Spotlight: Climate Planning

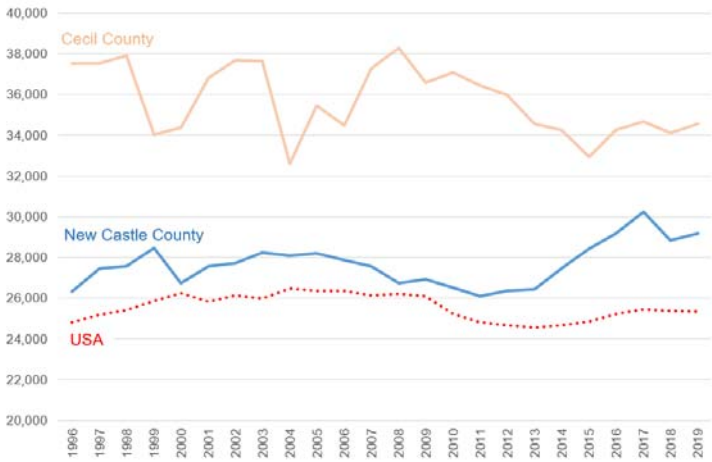

There is a strong chance (87%) of at least 2 feet of future Sea-level Rise (SLR) by the year 2100. Our updated SLR Transportation Vulnerability Assessment found that a 2-foot rise would impact about 10 miles of roadways and about 5 miles of railways in our region. WILMAPCO flags planned projects in these areas so that adaptation measures can be considered. We have also supported the City of Wilmington's climate action plan and its offshoot South Wilmington Shoreline Protection project, both with a special focus on protecting transportation infrastructure and homes, from flooding.

Electric vehicle adoption, coupled with better planning to reduce sprawl and vehicle miles traveled, will help reduce greenhouse gas emissions from the transportation sector. WILMAPCO has long supported statewide and local efforts to increase the number of publicly available EV charging stations. Their availability across the region has increased dramatically in recent years -- from less than a dozen in 2016 to more than five dozen today.

Performance Measurement

Vehicle Miles Traveled per Household

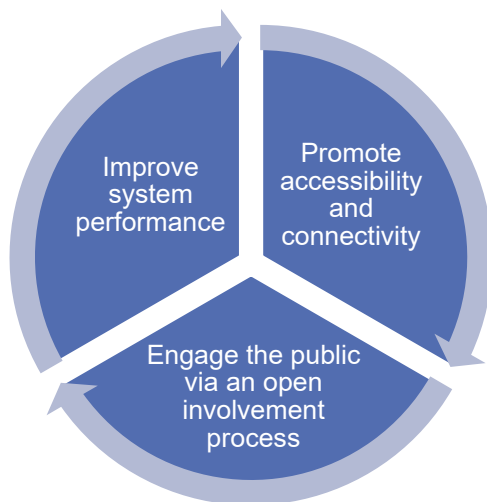

Goal: Efficiently Transport People

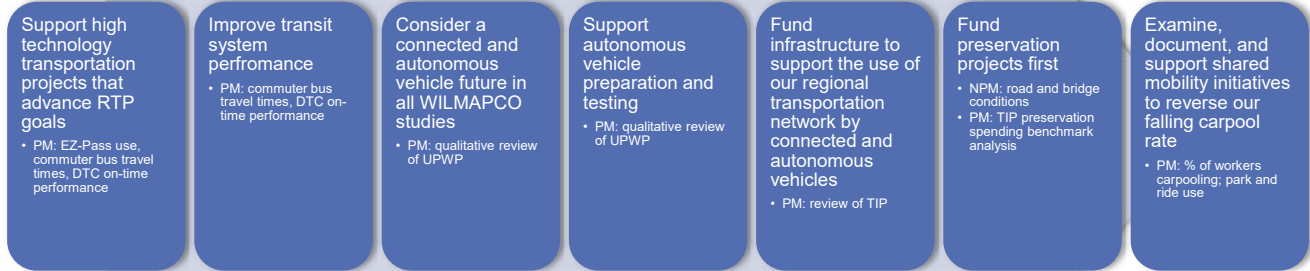

Our transportation network should move people efficiently, regardless of which form of transportation is used and who uses it. We should seek to maximize the professional and personal time of our residents and visitors, reducing the hours many spend each year in heavy vehicle traffic, or waiting for delayed buses and trains. We should engage the public about the best ways to accomplish this -- early, often, and throughout the planning process.

Improving system performance by loosening congestion, ensuring that accessibility and connectivity is achieved by all, and placing the public's voice at the forefront of new plans will help us to achieve this goal.

EFFICIENTLY TRANSPORT PEOPLE

IMPROVE SYSTEM PERFORMANCE

Public Opinion

79% say improving bus and train service is important/essential

Spotlight: Seeking Competitive Funding

The federal Bipartisan Infrastructure Law (BIL) provided a much-needed infusion of funds for investment in transportation. The BIL authorizes \$140 billion in new grant funding for which WILMAPCO region surface transportation projects can compete through more than two dozen grants with a focus on safety, bridges, climate change, resilience, and project delivery. Key discretionary grant programs provide funding to achieve our goals, such as the Safe Streets for All program funding strategies to eliminate roadway fatalities, programs to modernize rail and bus transit, and support for expanded electric vehicle infrastructure. Details are available at <https://www.transportation.gov/bipartisan-infrastructure-law>.

Source: DelDOT

Performance Measurement

Cecil County: On-time Fixed Route Bus Performance

New Castle County: On-time Fixed Route Bus Performance

PROMOTE ACCESSIBILITY & CONNECTIVITY

Improve access to public transportation

- PM: % of commutes by transit; employment and population within walking distance to bus stops

Analyze barriers mobility challenged groups experience in the transportation network

- PM: Maintain a TJ report; connectivity matrix

Plan and fund public transit expansion and management projects

- PM: TIP transit funding trends; ridership and transit use analysis; filling the commuter rail gap progress

Develop a complete, low-stress nonmotorized transportation network

- PM: bicycle, pedestrian, and multimodal TIP projects vs. the Prioritized Pedestrian Network; Greenway progress; trail counts; % of commutes by walking/biking; share of Level 1 or 2 LTS roadways in the counties

Public Opinion

70% of residents with disabilities say the public transit system meets the needs of residents at least somewhat well – compared to 49% of nondisabled residents

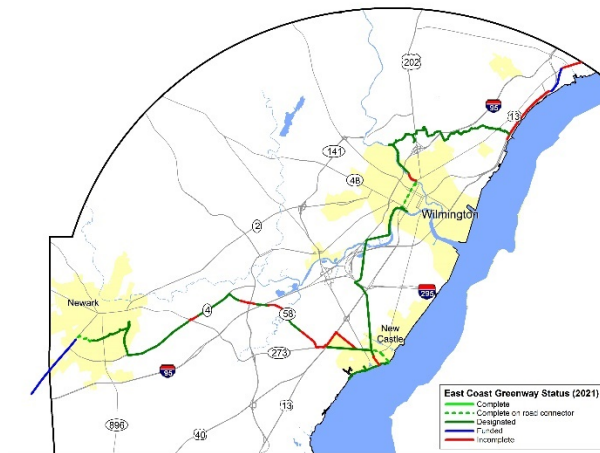

Spotlight: Connectivity Analysis

WILMAPCO analyzed connectivity from homes to key destinations by easy and accessible walking, bicycling, bus, and car trips in the 2019 Transportation Justice Plan. Destination types included grocery stores, employment centers, libraries, and medical centers. We found that, on average, 95% of homes are well connected to key destinations by car. By contrast, less than a quarter of homes have good connections, on average, to destinations by other modes. Beyond regional statistics, the analysis helps us better delineate food deserts (or low-income areas with no nearby supermarkets), examine the social equity dimensions of transportation connectivity, and give us a way to measure the connectivity benefits of targeted transportation improvements, such as bus line expansions and new pathways.

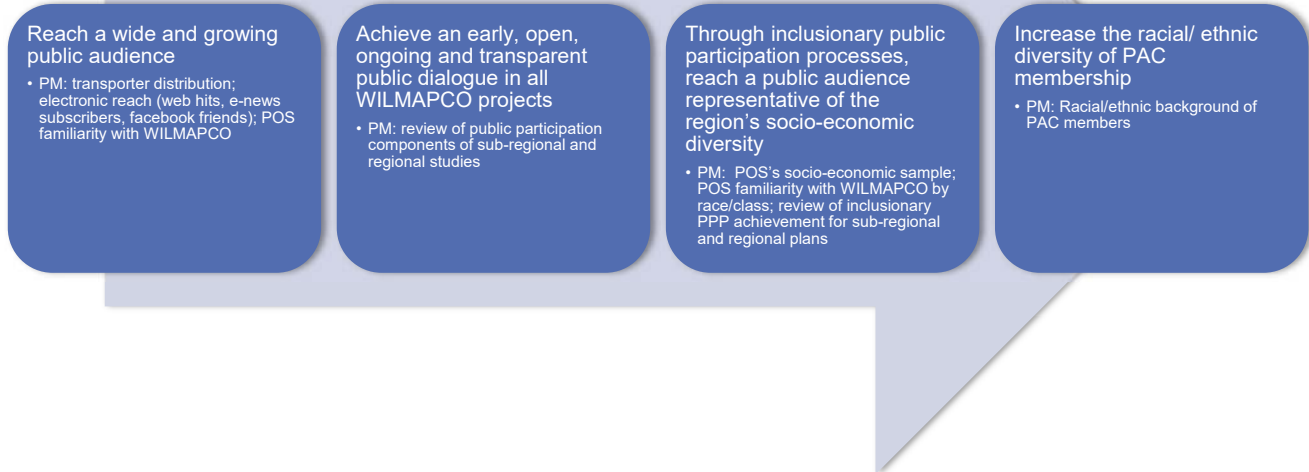

Performance Measurement

East Coast Greenway Progress

ENGAGE THE PUBLIC VIA AN OPEN INVOLVEMENT PROCESS

Public Opinion

13% of Black residents are familiar with WILMAPCO -- compared to 36% of White residents

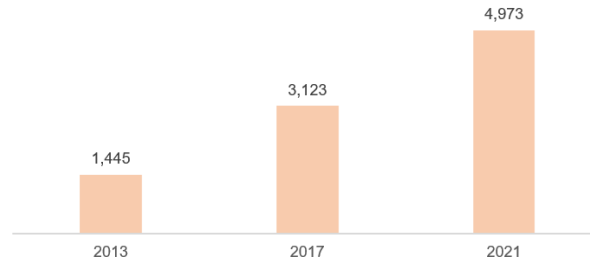

Spotlight: Urban Technology Deserts

While most residents in our region find online engagement with planning effective, lower-income residents often struggle with it. According to our 2022 Public Opinion Survey, only about a third of lower-income residents find web-based public meetings (37%) or online surveying (30%) effective. Those figures are about double for higher-income residents.

To highlight and better account for this disparity, WILMAPCO identified “urban technology deserts” in 2020. These are places where many households lack reliable computer and internet access--principally due to poverty--in our region. Planners will supplement virtual engagement with low-tech outreach and engagement, such as door-to-door surveys and in-person meetings, during community planning efforts within tech deserts and during larger regional studies.

Performance Measurement

E-News Subscribers

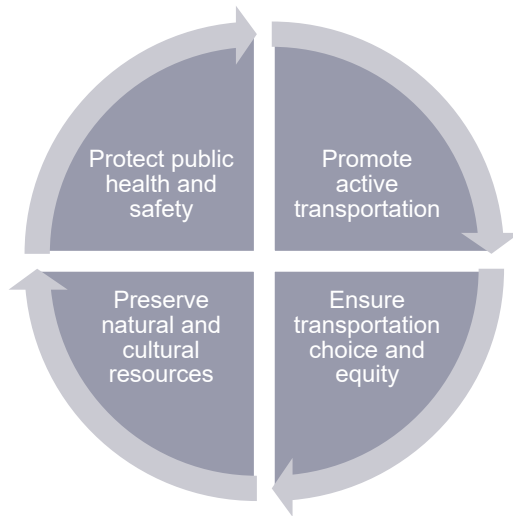

Goal: Improve Quality of Life

Transportation influences the health and well-being of people and the environment. On the human health side, private vehicle crashes are a leading cause of accidental death in the United States. Overreliance on private vehicles also lowers physical activity, increasing the risk of obesity and cardiovascular disease, and produces emissions, which harm our respiratory systems, and have been linked to cancer. Societal inequities are also reproduced in the transportation network. Low income and ethnic and racial minority communities are more burdened with transportation's negative impacts (such as exposure to emissions) and receive fewer benefits (such as funded projects in their communities). The expansion of infrastructure -- and the often subsequent triggering of new development -- also threatens the continued destruction of our natural habitats.

By working to protect public health and safety, promoting active transportation, ensuring transportation choice and equity, and preserving our natural and cultural resources we can improve our quality of life.

IMPROVE QUALITY OF LIFE

PROTECT PUBLIC HEALTH & SAFETY

Prioritize safety for all modes

- NPM: road injuries and fatalities per VMT; total road injuries and fatalities; total bicycle crashes, fatalities, and injuries

Support development and update of a Vision Zero Plan in New Castle County

- PM: qualitative review of UPWP

Improve safety for people walking

- NPM: total pedestrian crashes, fatalities, and injuries
- PM: total pedestrian crashes - New Castle County & Cecil County

Support disaster and national defense preparedness planning efforts

- PM: transportation needs of DOD sites in region identified; qualitative review of UPWP

Exceed transportation conformity standards

- PM: on road mobile source ozone and PM2.5 projections; qualitative review of UPWP

Fund cost-effective CMAQ projects with the greatest air quality benefits

- PM: WILMAPCO CMAQ prioritization vs. eventual funding
- NPM: 2- and 4-year total emission reductions

Seek to improve multimodal access and connectivity to healthy and affordable food, employment, and services in all WILMAPCO studies

- PM: connectivity analysis; total emission reductions; multimodal components of plans

Public Opinion

20% of low-income residents have transportation difficulty reaching healthy and affordable grocery shopping – compared to 4% of high income residents

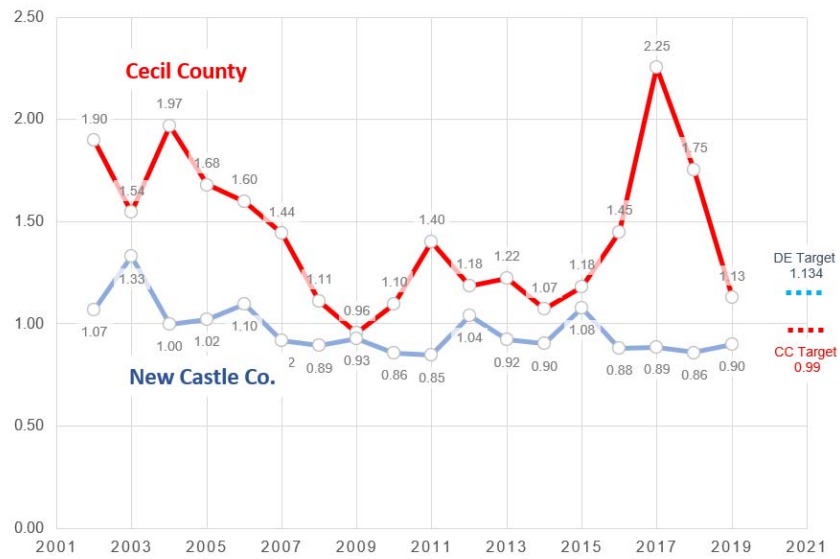

Spotlight: Health Impacts Data Report

A recent WILMAPCO data report found that our Social Determinants of Health (SDOH) index had stronger correlations with health behaviors and outcomes — such as asthma and obesity—than the national Social Vulnerability Index (SVI). This gives us confidence with our continued application of the SDOH index for planning and project prioritization.

The data report also examined correlations between places with high rates of asthma and physical inactivity and their transportation and land use conditions, such as: walkability, parks, freight routes, and polluting sites. Besides proximity to nearby polluting sites, for example, there were generally stronger correlations between asthma and health and SDOH factors, such as obesity and income, rather than other transportation and land use conditions. We also found areas with greater inactivity had better walking connections, bus access, and were more likely to be nearby parks than more physically active communities. While a high-level scan, the results suggest the limited impact these conditions have on influencing physical activity levels compared to deeper SDOH factors.

Performance Measure

Fatal Crashes per 100m Vehicle Miles Traveled¹⁰

Source: Delaware Greenways

¹⁰ See the 2022 Regional Progress Report: <http://www.wilmapco.org/regional-progress-report/>

PROMOTE ACTIVE TRANSPORTATION

Fund transportation choices

- NPM: Percentage of non-SOV trips
- PM: TIP funding trends

Apply a Complete Streets Policy in all WILMAPCO studies and in the TIP

- PM: review of UPWP studies and the TIP

Fund TAP investments within areas of greatest need

- PM: WILMAPCO TAP prioritization versus eventual funding

Develop and implement SRTS Programs

- PM: qualitative review of UPWP

Public Opinion

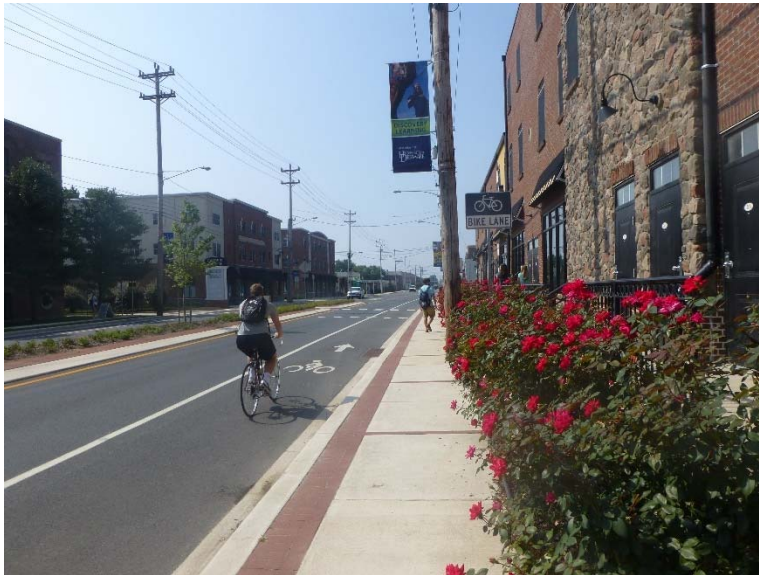

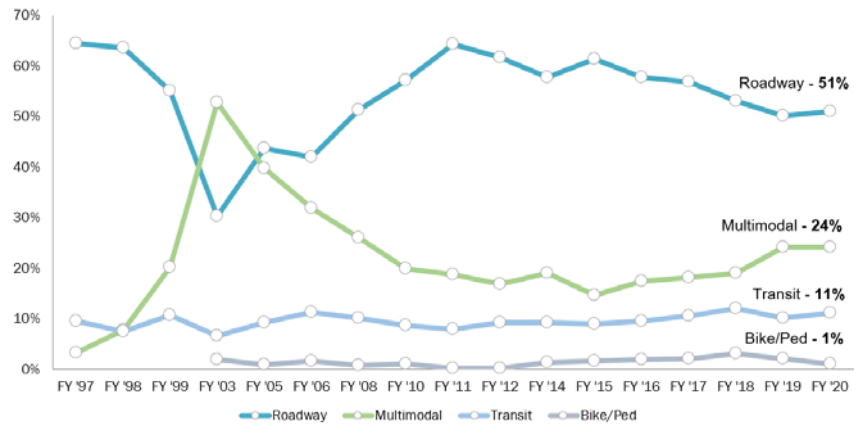

69% say improving facilities for biking and walking is important/essential

Spotlight: Road Safety/Road Diet Successes

With roadways, bigger isn't always better. Rather, roads can be made safer while providing the appropriate number of lanes for the amount of traffic and providing for walking, bicycling and transit trips. A Road Diet, or roadway reconfiguration, involves narrowing or eliminating travel lanes to slow speeding traffic and increase safety of all roadway users. This typically involves convert a four-lane street to one with two through lanes, a center two-way left-turn lane (TWLTL), and better facilities for walking and bicycling. Local examples include Cleveland Ave (19% crash decrease) and Philadelphia Pike (13% crash decrease). Other recent road diets have been implemented on Union Street and Memorial Drive with more planned. Learn more at <https://deldot.gov/Programs/DSHSP/reports/Road-diet/>.

Performance Measure

WILMAPCO TIP Funding Trends by Mode

ENSURE TRANSPORTATION CHOICE & EQUITY

Analyze the inequities EJ groups experience in the transportation network

- PM: Maintain an EJ report

Reduce transportation costs for low and moderate-income households

- PM: transportation as a percentage of household spending; inflation-adjusted bus/train fares; transportation and housing affordability data

Ensure EJ communities receive their equitable share of TIP funding

- PM: TIP spending within EJ communities

Generate beneficial transportation projects within EJ communities

- PM: TIP spending within EJ communities

Plan for livable, sustainable and prosperous neighborhoods

- PM: qualitative review of UPWP

Public Opinion

20% of Black residents have transportation difficulty reaching social activities – compared to **9%** of Whites

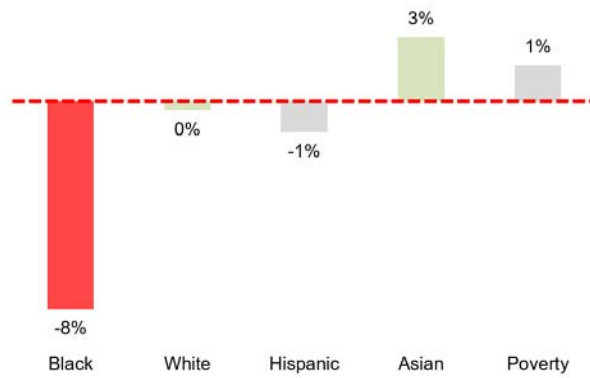

Spotlight: Transportation Justice (TJ)

The 2019 Transportation Justice Plan identifies key social inequities in the Wilmington region's transportation system. We examine the fairness and inclusivity of the existing and planned system, as well as our public engagement processes. Groups covered in the TJ Plan include: those with low incomes, racial and ethnic minorities, seniors, people with disabilities and people living in households without vehicles, and those with limited English proficiency and low literacy. Recommendations are made to overcome observed barriers and inequities.

One key finding of the TJ Plan was less than expected project spending within Black neighborhoods since the turn of the century. This is, in part, due to an increasing share of transportation project spending in the region's outer suburbs in response to population growth and sprawl. The finding led to an adjustment to the project prioritization process to help drive more community transportation project spending within Black neighborhoods.

Performance Measures

TIP Spending Equity, Deviation from Expected, FY 2002 – FY 2020 TIPs¹¹

¹¹ See the Regional Progress Report: <http://www.wilmapco.org/regional-progress-report/>

PRESERVE NATURAL & CULTURAL RESOURCES

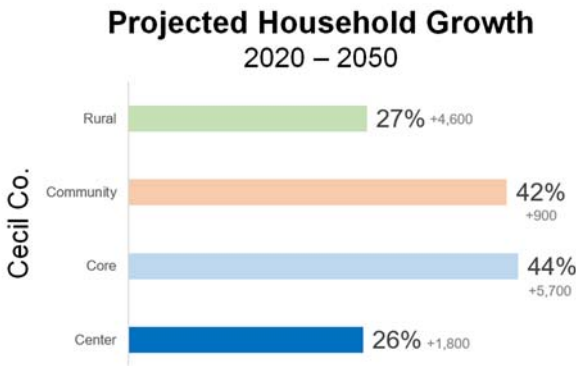

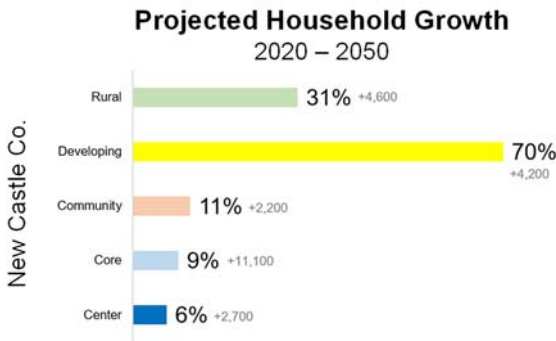

Public Opinion

84% say preserving farmland and open spaces are important

Spotlight: TIP Spending vs. TIA

Heavy recent and expected household growth outside Center and Core Transportation Investment Areas (TIAs), delineated in the next section of the RTP, has influenced transportation spending patterns. Growth outside the I-95 corridor in previously less-developed areas has triggered recent and planned highway upgrades – such as the new US 301 Expressway, SR 1 Expansions, and several road widenings in Southern New Castle County. Since 2004, Developing and Rural TIAs have received a greater share of project dollars than their share of regional households today and their projected share by 2050. By contrast, spending within Center, Core, and Community TIAs has fallen under their projected share of 2050 households.

Performance Measures

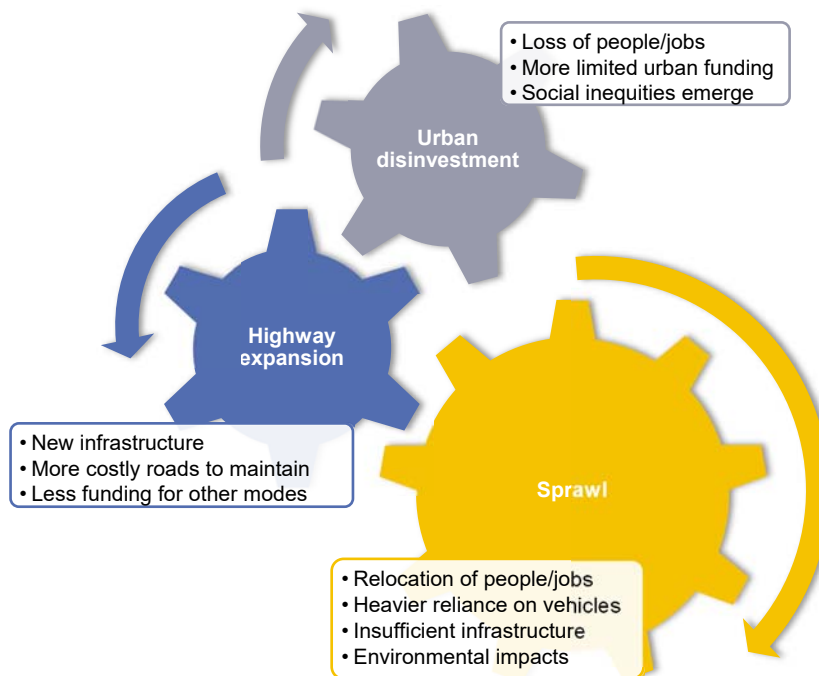

Source: Microsoft

TRANSPORTATION INVESTMENT AREAS

Land use and transportation planning are often not well coordinated on a regional scale. This has historically led to Wilmington's suburban sprawl and, today, continues to churn a "Cycle of Sprawl" which threatens lasting economic growth, leads to social inequity and poor health outcomes, and endangers our environment. As shown in the conceptual graph below, sprawling developments are built on the region's edge; which necessitates transportation expansions (encouraging more sprawl); and leaves less funding for developed areas (encouraging more sprawl). The result is a continuation of suburban sprawl, increasing total vehicle miles driven, and persistence of social inequities.

The Cycle of Sprawl

While the cycle continues in the WILMAPCO region, channeling development into existing places and identified growth areas is the preferred development method of our residents. This is illustrated in the graphic below.

Public Opinion about Regional Development¹²

95%

Preserving open space and farmland is at least somewhat important

84%

Planning for sea-level rise effects is at least somewhat important

84%

It is sometimes or always appropriate to mix residential, office, and retail

84%

Connecting neighborhoods to each other and nearby destinations is at least somewhat important

82%

Revitalizing existing communities and downtowns is at least somewhat important

68%

Development and transportation projects should be concentrated in areas with higher population and employment; projects in rural areas should be limited to safety and system maintenance

Transportation Investment Areas (TIAs)

One way to help break the cycle of sprawl is to properly invest in Transportation Investment Areas (TIAs). TIAs are an overarching guide for where the various types of transportation investments ought to go, in recognition of transportation's close relationship with land use. The TIAs were developed by reviewing and consolidating state and local land use plans into a single map.

The graphic below provides a description of each TIA type. Generally, places with the heaviest concentrations of population and employment and infrastructure – "Centers" and "Cores" – are tabbed for the greatest transportation investments, to maintain and expand existing networks. Places with the least development -- "Rural" -- should see the most limited project funding. The three other TIA types ought to receive varying levels of project funding as needed. WILMAPCO should ensure that proposed RTP and TIP projects are appropriate for the TIA designation.

While not a TIA type, we also identify four distinct villages within Cecil County's Core TIA. These places were identified in the County's Comprehensive Plan. Investments made in and surrounding these villages should take care to consider potential disruptions to their unique historic character.

¹² WILMAPCO Public Opinion Survey, 2022

Center

High existing and planned concentrations of people and jobs with opportunities for significant re-development.

Transportation Objectives: intensive transportation investment with an emphasis on public transportation (including rail and the most frequent bus service) and walking and bicycling improvements. New highway interchanges should be discouraged. High frequency bus service is appropriate.

Core

Established places with a mixture of people and jobs, often along and nearby suburban highways.

Transportation Objectives: maintain and manage the existing infrastructure while allowing for system expansion for all modes of transportation, except train stations and the addition of public transit centers. Moderate frequency bus service is appropriate here.

Community

Established places home to mostly single-family residential communities.

Transportation Objectives: maintain and manage the existing infrastructure while allowing for some periodic system expansions. Infrequent bus service is appropriate.

Developing

Quickly developing places with unsettled land use and transportation patterns.

Transportation Objectives: maintain and manage the existing and emerging infrastructure. Some system expansion will be necessary, but major capacity road expansions and interchanges should be discouraged. Infrequent bus service is appropriate.

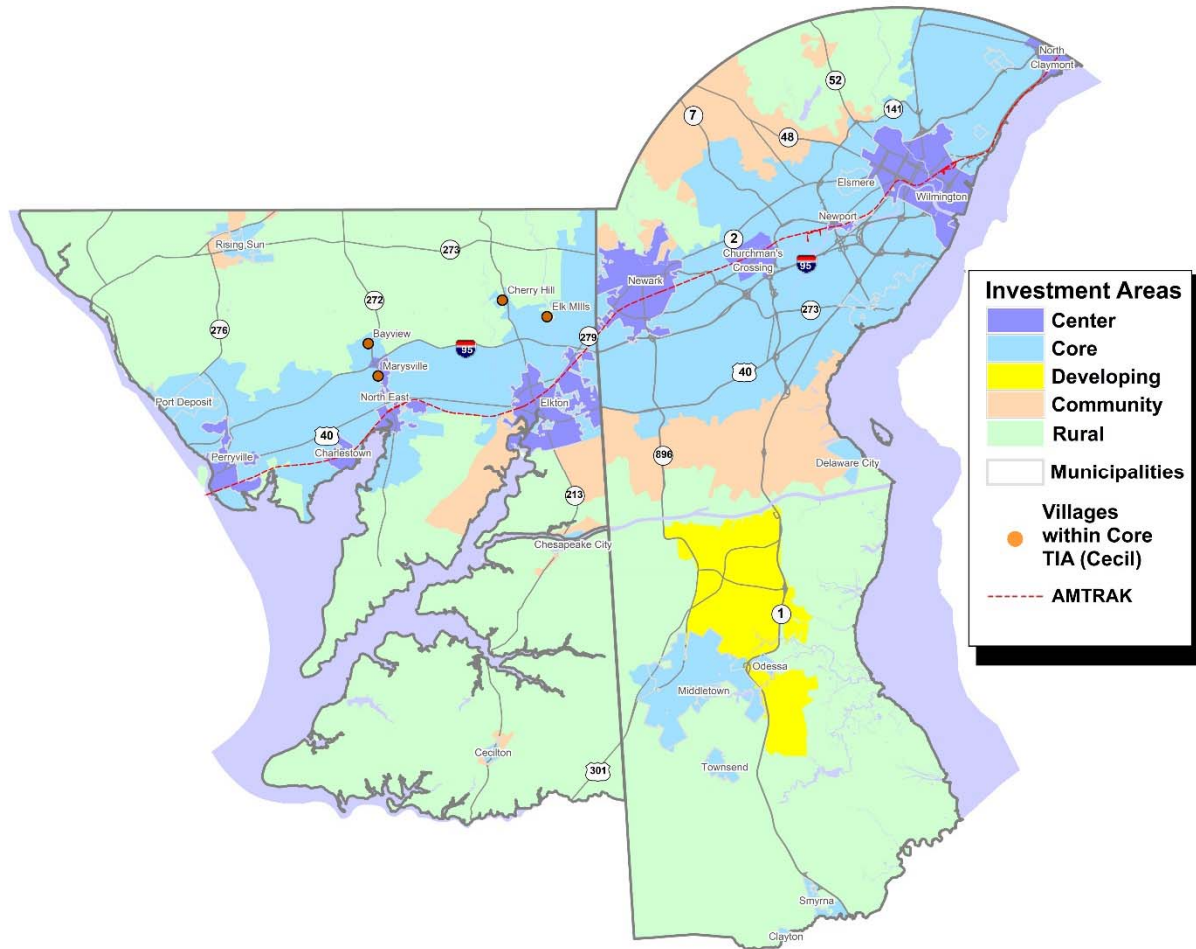

Rural

Agricultural and natural areas where urban development is not expected.

Transportation Objectives: preserve the existing infrastructure with an aim of protecting existing agriculture and natural resources. All system expansions apart from bicycling and walking paths should be actively discouraged. No fixed-route bus service is appropriate. Scenic byway easement purchases should be pursued where applicable.

Transportation Investment Areas (TIAs)

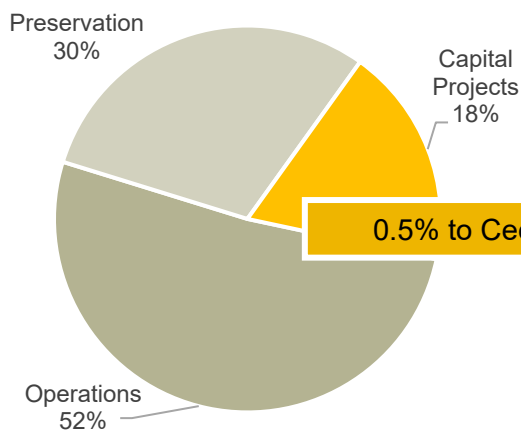

FINANCIAL PLAN

The Financial Plan of the RTP assesses how much funding is available for future transportation investments, priority projects for road, transit, bicycle and pedestrian infrastructure known as the Constrained Project List, and desired projects that cannot be funded based on current funding forecasts known as the Aspirations List. We anticipate that additional projects will be added through competitive grants and other innovative funding sources.

2050 Financial Forecast

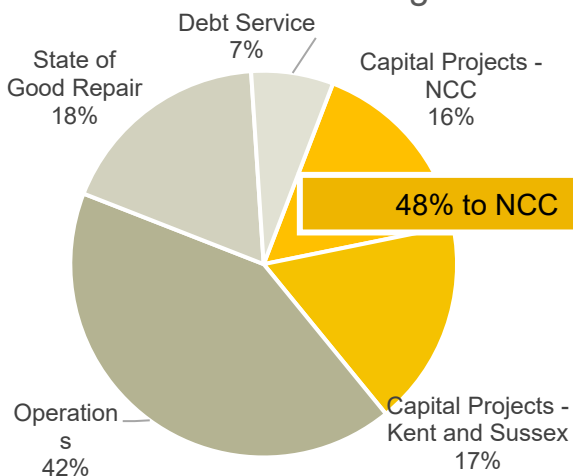

Working with DeIDOT and MDOT, we developed funding forecasts for New Castle and Cecil counties. Additional details about assumed operating and system preservation expenses may be found in the RTP appendices.

Maryland Funding

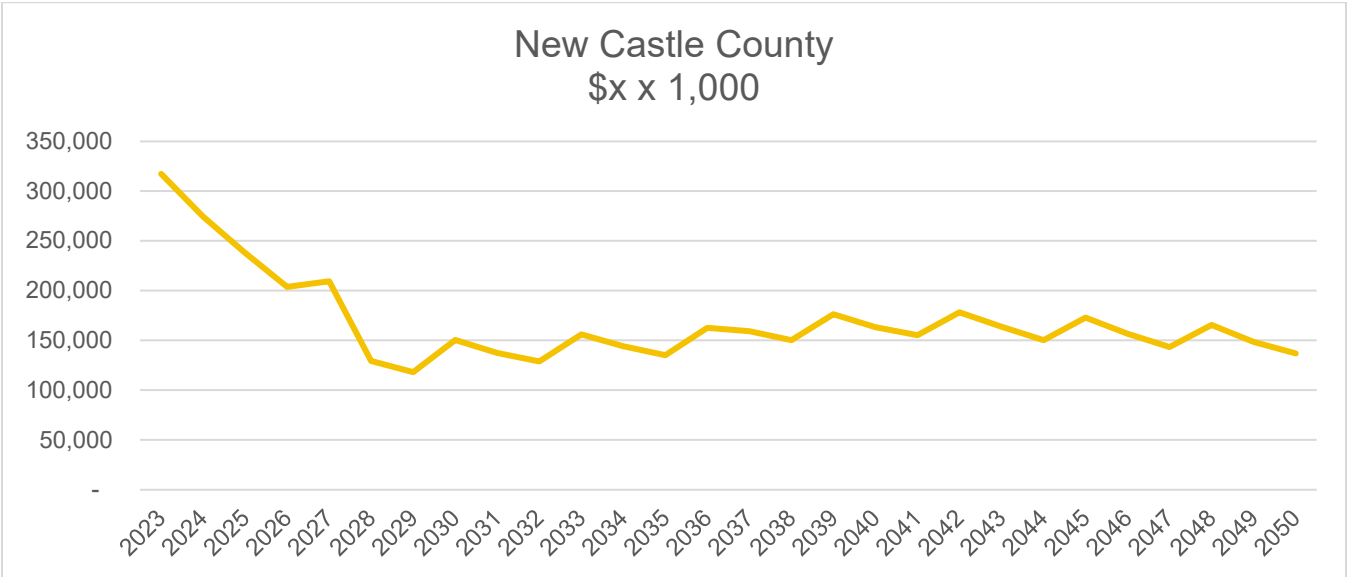

Cecil Co Funding Est.	Available Funds
\$s x 1,000	ST: 2023-2028
Does not include operating and systems preservation expenditures, MDTA Toll Funds, and Grants	MT: 2029-2039
	LT: 2040-2050
Short term	5,200
Medium term	49,100
Long term	118,000
TOTAL	172,300

Delaware Funding

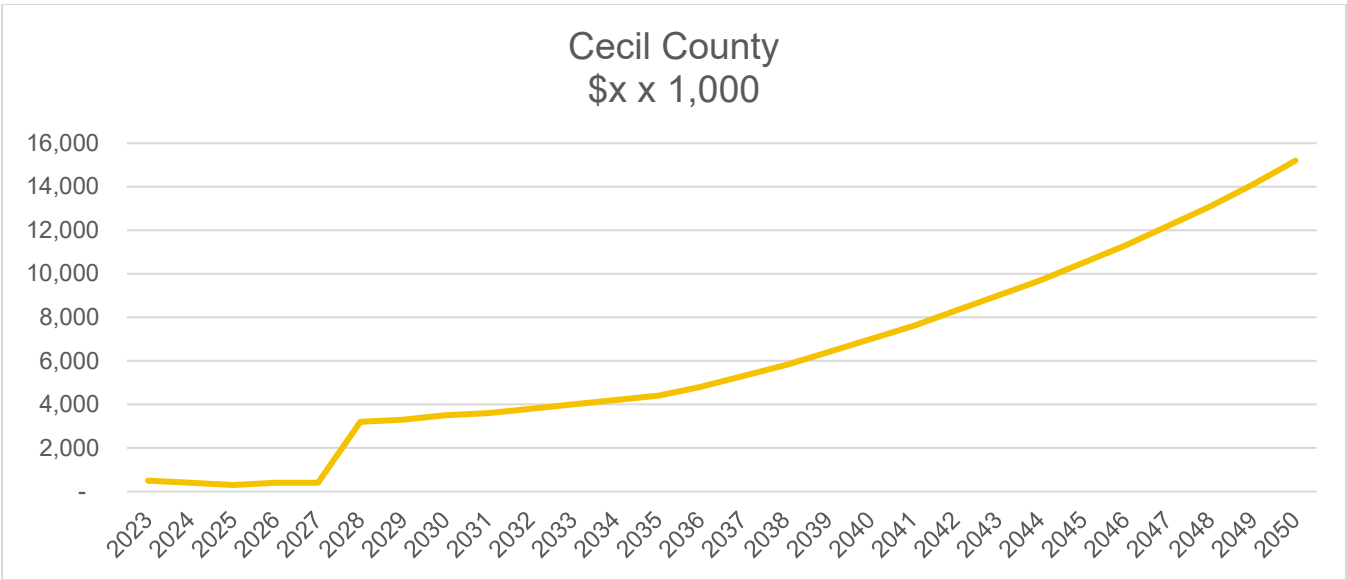

New Castle Co Funding Est.	Available Funds
\$s x 1,000	ST: 2023-2028
Does not include operating and systems preservation expenditures, and Grants	MT: 2029-2039
	LT: 2040-2050
Short term	\$1.4 billion
Medium term	\$1.6 billion
Long term	\$1.7 billion
Total	\$4.7 billion

Funding Forecast for New Castle County Capital Transportation Projects

Funding Forecast for Cecil County Transportation Expansion

Financially Constrained Projects

Many capital projects can be pursued through 2050 with available funding. The projects presented in this section represent the current priority projects. This listing will likely evolve in the decades to come, as funding is identified and lost, and policies, development patterns, and priorities change.

Total Costs by Implementation Term and County

County	Time (ST to 2028, MT 29-39, LT 40-50)	2023 Cost (\$s x 1,000)	Assumed Inflation Rate	Year of Expenditure (\$s x 1,000)
Cecil County Short Term	Available 5,200 +101,700 MDTA/Grant/Local = 106,900	95,638	5% inflation	106,900
Cecil County Medium Term	Available 49,100	41,333	3% inflation	49,100
Cecil County Long Term	Available 118,000 + MDTA 1,184,510 + 10,202,201 grant/other = 1,504,711	704,554	3% inflation	1,504,711
Cecil County Grant	Grant TBD	90,782	3% inflation	122,639
Cecil County Total		932,307		1,783,350
New Castle County Short Term	Available 1,372,021	1,148,810	5% inflation	1,372,051
New Castle County Medium Term	Available 1,618,047	1,113,092	3% inflation	1,618,047

Map of Financially Constrained Projects Under \$15 Million

PROPOSED PROJECTS BELOW \$15 MILLION
BY IN-SERVICE YEAR

City of Wilmington Inset

*Item 6, East Coast Greenway, refers to the incomplete sections of the route in New Castle County.
Item 45 refers to short and medium-term implementation in Cecil County with segments to be determined.

List of Financially Constrained Projects Under \$15 Million (\$s x 1000)**Timeframe (Short term to 2028; Medium Term 2029-2039; Long Term 2040-2050)**

Map ID	County	Project Name	Mode	Category	TIA	Year of Expenditure Cost	In Service Year
1	NCC	Improve pedestrian bridge and connector trail over I-495 pedestrian bridge	Bike/Ped	Management	Center	\$2,625	2024
1	NCC	Install street lighting, especially in neighborhoods and along Hickman Road.	Multimodal	Management	Center	\$2,100	2024
1	NCC	Naamans Rd / Philadelphia Pike access management (new signals at the spine road intersections; converting Alcott Avenue to right-in, right-out)	Multimodal	Management	Center	\$5,250	2024
1	NCC	Naamans Road shared use pathway	Bike/Ped	Management	Center	\$7,379	2030
1	NCC	Philadelphia Pike/Naamans Road intersection safety and capacity improvements	Multimodal	Management	Center	\$14,258	2035
1	NCC	Ridge Road - change free right turn from Naamans Road to a yield, and improving EB Ridge Road lane merge approaching Analine Village using signs and pavement markings	Multimodal	Management	Center	\$6,300	2024
1	NCC	Sidewalk upgrades: Hickman Rd (access to Tri-State Mall), Analine Village path from Parkway Ave to Woodfield Dr, Darley Rd	Bike/Ped	Management	Center	\$3,150	2024
1	NCC	Society Drive - all way stop or a roundabout at the Northtowne Plaza driveway/bus stop crossing	Multimodal	Management	Center	\$6,300	2024
1	NCC	US 13, Philadelphia Pike: I-495 - PA Line safety and multimodal improvements	Multimodal	Management	Center	\$6,986	2035

Unfunded Aspiration Projects

The projects outlined in the previous section expend much of the forecasted capital through 2050. A separate, longer list of projects awaits funding. These “aspiration” projects were identified in recent transportation studies, or by the Maryland and Delaware Departments of Transportation, and are considered relevant by WILMAPCO. Maps and a listing of the aspiration projects follow.

Map of Aspiration Projects – Bicycle/Pedestrian and Multimodal

UNFUNDED "ASPIRATIONS" PROJECTS

RTP DEVELOPMENT

The contents of the present Plan were informed by many factors, agencies, and individuals. Chief among these was ensuring its compliance with current federal transportation requirements. This includes having a financially constrained and air quality-conforming project list. Performance measurement was also built into this Plan. We identify both relevant, nationally-required performance indicators with each action, and other deeper measures WILMAPCO uses.

Our progress in achieving previous RTP actions (documented in the 2021 Regional Progress Report, which is available in the appendix) was another major influence. Objectives and actions were revised, added, or removed, based on our performance.

Finally, feedback from our member agencies, local governments, civic representatives, and the public informed the Plan. A demographically-representative telephone public opinion survey (available in the appendix) of 600 residents across our region was conducted to better understand transportation needs. Representatives from WILMAPCO also gathered feedback on draft versions of the RTP through an "Our Town" open house/RTP Public Workshop event held at the Embassy Suites in Newark on February 8, 2023. WILMAPCO staff also took the RTP "on the road" and provided more than 20 presentations to civic and local government groups in the counties WILMAPCO serves. We also participated in Newark Community Day with a post-it note display board allowing residents to share their ideas for needed improvements, developed an RTP flyer that was shared during several events and workshops, issued a press release, posted frequently on social media, and featured the RTP in several editions of WILMAPCO's Transporter and E-News newsletters reaching more than 8000 subscribers. The official public comment period for the document was held from January 16 through March 6, 2023.

2023 RTP Update Begins to Take Shape

WILMAPCO has begun updating the 2050 Regional Transportation Plan (RTP). Our overarching plan, the RTP lays out the region's transportation policies and identifies major transportation projects on the horizon. The RTP is built on the findings of our Progress Report — which tracks the implementation of current RTP policy actions — and our Public Opinion Survey, which gauges public opinion about transportation issues.

The 2050 RTP 2023 Update is not likely to feature a major overhaul of policies. Instead, minor adjustments to actions and performance measures are under consideration. These include a new action to "Support development of a Vision Zero Plan in New Castle County" and another to "Gather data developed in transportation studies is publicly accessible." The Vision Zero Plan would help address safety by consider more ways to achieve zero annual fatalities.
