### Short and Sweet

*Analysis of Shorter Trips Using National Personal Travel Survey Data*

26 July 2012

**Table 1** Walk Mode Share By National Travel Surveys (Hu 2004, Table 9)

	1990	1995	2001	2009
Walk Mode Share	7.2%	5.5%	8.6%	11.1%

*The 2009 NHTS shows higher walking mode share than previous national surveys, which probably reflects a combination of actual changes in travel activity and more comprehensive data collection.*

**Table 3** Shorter Trip Mode Share

Trip Distance	Portion of Total Trips	Walk	Bike	Transit	POV	Totals
0.5 or less	10%	61%	3.1%	1.5%	34%	100%
1.0 or less	19%	51%	3.3%	3.0%	42%	100%
3.0 or less	41%	27%	2.2%	3.9%	67%	100%

## Bike – Pedestrian Data

**Figure 1** Share of Trips By Mileage Category<sup>1</sup>

**Figure 2** Mode Share By Mileage Category

Source: NPTS, Victoria Transport Policy Institute

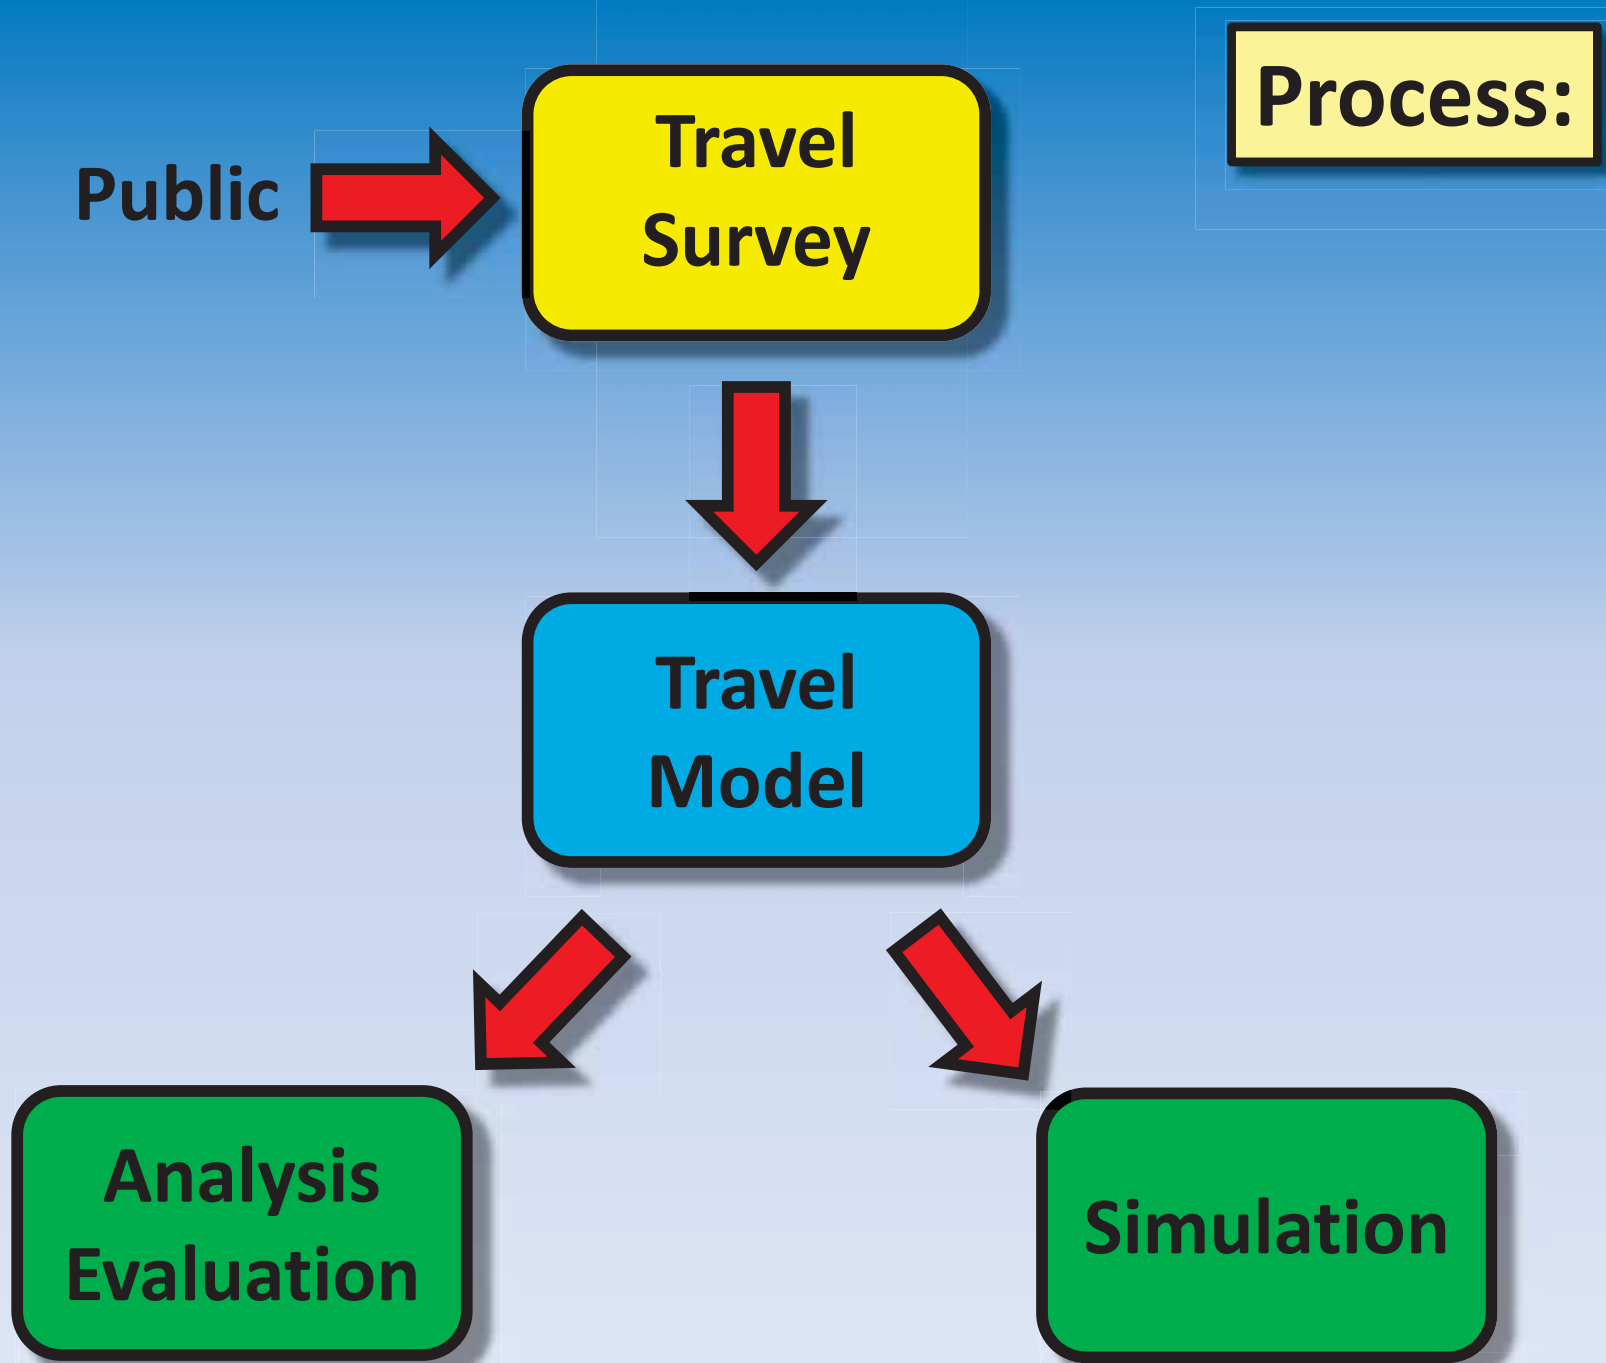

According to National Personal Travel Survey:

About **12% of total trips** are non-motorized.

(About 2X values reported by DOT/MPO travel surveys).

Over **60% of trips of 1 mile** or less are walking & biking.

Over **30% of trips of 2 miles** or less are walking & biking.

### **Sample Script:**

University of Delaware  
2014 DelDOT Travel Survey

INTRODUCTION Hello, I'm calling from the University of Delaware. We are conducting a survey of Delaware residents for the Delaware Department of Transportation to collect information on different types of traveling people do, including walking and biking, to help determine current and future transportation needs and services.

Your phone number has been chosen randomly by the computer to be Included in the survey.

INFORMATION For each of the trips you made YESTERDAY, even those you walked or biked, we need to know:

- where the trip began and ended,
- start time and end time,
- trip purpose.

Let's go through each trip, and I will record the information.

## Sample Script:

WALK 1: Did you walk anywhere yesterday?

YES

NO (Go to BIKE1)

Include any walks taken within your neighborhood, to places outside the neighborhood (such as going to the store) or walks started from another location (such as from work to lunch). EVEN SHORT WALKING TRIPS, WALKING FOR EXERCISE, OR WALKING THE DOG ARE OF INTEREST.

BIKE 1: Did you bike anywhere yesterday?

YES

NO (Go to DRIVE1)

Include any bike taken within your neighborhood, to places outside the neighborhood (such as going to work or the store) or bike started from another location (such as from work to lunch). EVEN SHORT BIKING TRIPS OR BIKING FOR EXERCISE ARE OF INTEREST.

## ***Bike – Pedestrian Data***

**WALK 2: From what ORIGIN LOCATION did you BEGIN YOUR FIRST WALKING TRIP ?**

**Sample Script:**

- ( ) HOME
- ( ) WORK
- ( ) Store
- ( ) School
- ( ) Drop off / Pick up a person
- ( ) Social (Neighbor, friend or family's house)
- ( ) Recreational (Exercise or Pleasure)
- ( ) Park / Playground / Basketball Court / Tennis Court
- ( ) Gym / YMCA
- ( ) Restaurant
- ( ) Child Care Facility
- ( ) Doctor's / Medical
- ( ) Bank / Post Office
- ( ) DART / Public Transportation
- ( ) Barber / Hairstylist
- ( ) Church / Worship
- ( ) OTHER \_\_\_\_\_
- ( ) DON'T KNOW
- ( ) REFUSED

## ***Bike – Pedestrian Data***

### **Survey Results:**

### ***Mode, by Year***

<b>Mode</b>	<b>1997 – 2011</b>	<b>2012</b>	<b>2013</b>
Car	96.5%	83.8%	89.0%
Transit	1.5%	1.5%	1.1%
Walk	1.3%	<b>13.6%</b>	<b>9.1%</b>
Bike	0.7%	<b>1.0%</b>	<b>0.8%</b>

**1997 – 2011: Script #1**

**2012 – 2014: Script #2    Emphasis on Bike/Ped Data Collection**

## Bike – Pedestrian Data

### Survey Results:

### Trip Purpose by Mode

Purpose	Car	(Pass)	Bus	Walk	Bike
Work	92.0%	4.2%	1.7%	1.9%	0.2%
Store	79.1%	15.4%	0.5%	4.5%	0.5%
School	83.5%	9.1%	3.3%	4.1%	
Drop off/Pick up a person	92.1%	6.2%		1.7%	
Social (visit neighbor, friend or family)	66.6%	18.9%	0.3%	13.7%	0.6%
Recreational (walked for exercise/pleasure)	10.2%	3.0%	0.2%	81.6%	5.0%
Park/Playground/Basketball Court/Tennis Crt, etc.	60.9%	14.5%		24.6%	
Gym/YMCA	92.6%			5.9%	1.5%
Restaurant	62.5%	30.8%	0.3%	6.4%	
Child Care Facility	100.0%				
Doctor_s (medical)	71.0%	25.7%	2.2%	1.1%	
Bank or Post Office	70.4%	12.2%	1.0%	13.3%	3.1%
Public Transportation Stop (Train/Bus)	40.0%		33.3%	20.0%	6.7%
Barber/Hairdresser	85.2%	11.1%			3.7%
Church/House of Worship	76.5%	21.3%		1.5%	0.7%

## *Bike – Pedestrian Data*

### **Survey Results:**

### *Attitudinal Questions*

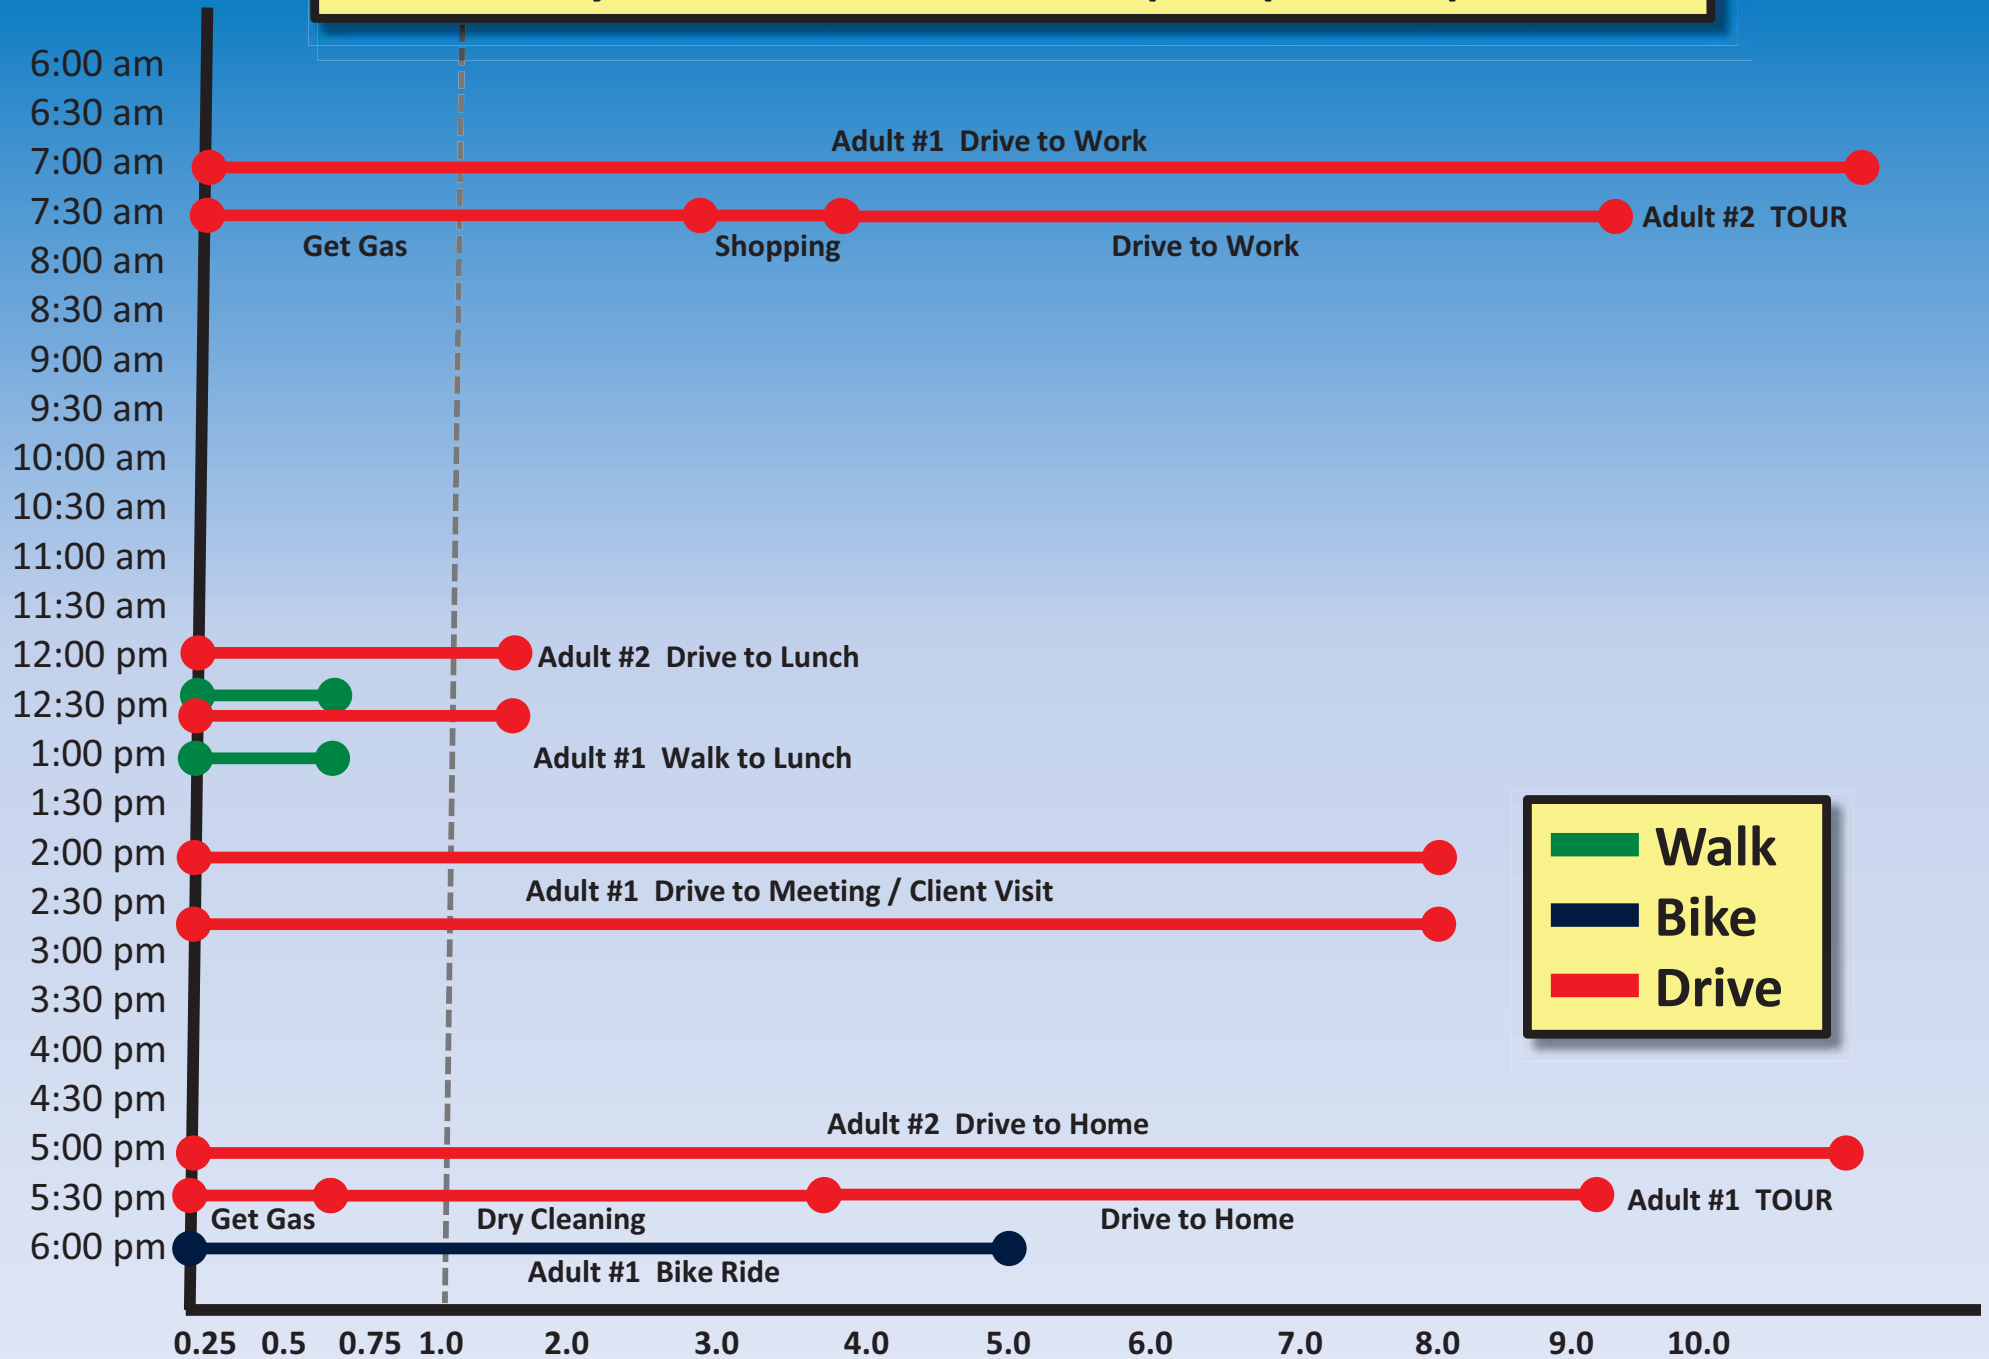

ATT 5: How Far do You Feel Comfortable WALKING or BIKING ?

	DELAWARE	New Castle	Kent	Sussex
Walking	4.3	4.7	3.7	3.6
Walking with Sidewalk	5.3	5.5	5.4	4.9
Biking	10.0	11.6	8.9	7.3
Biking with Trail	12.0	13.4	11.0	10.0

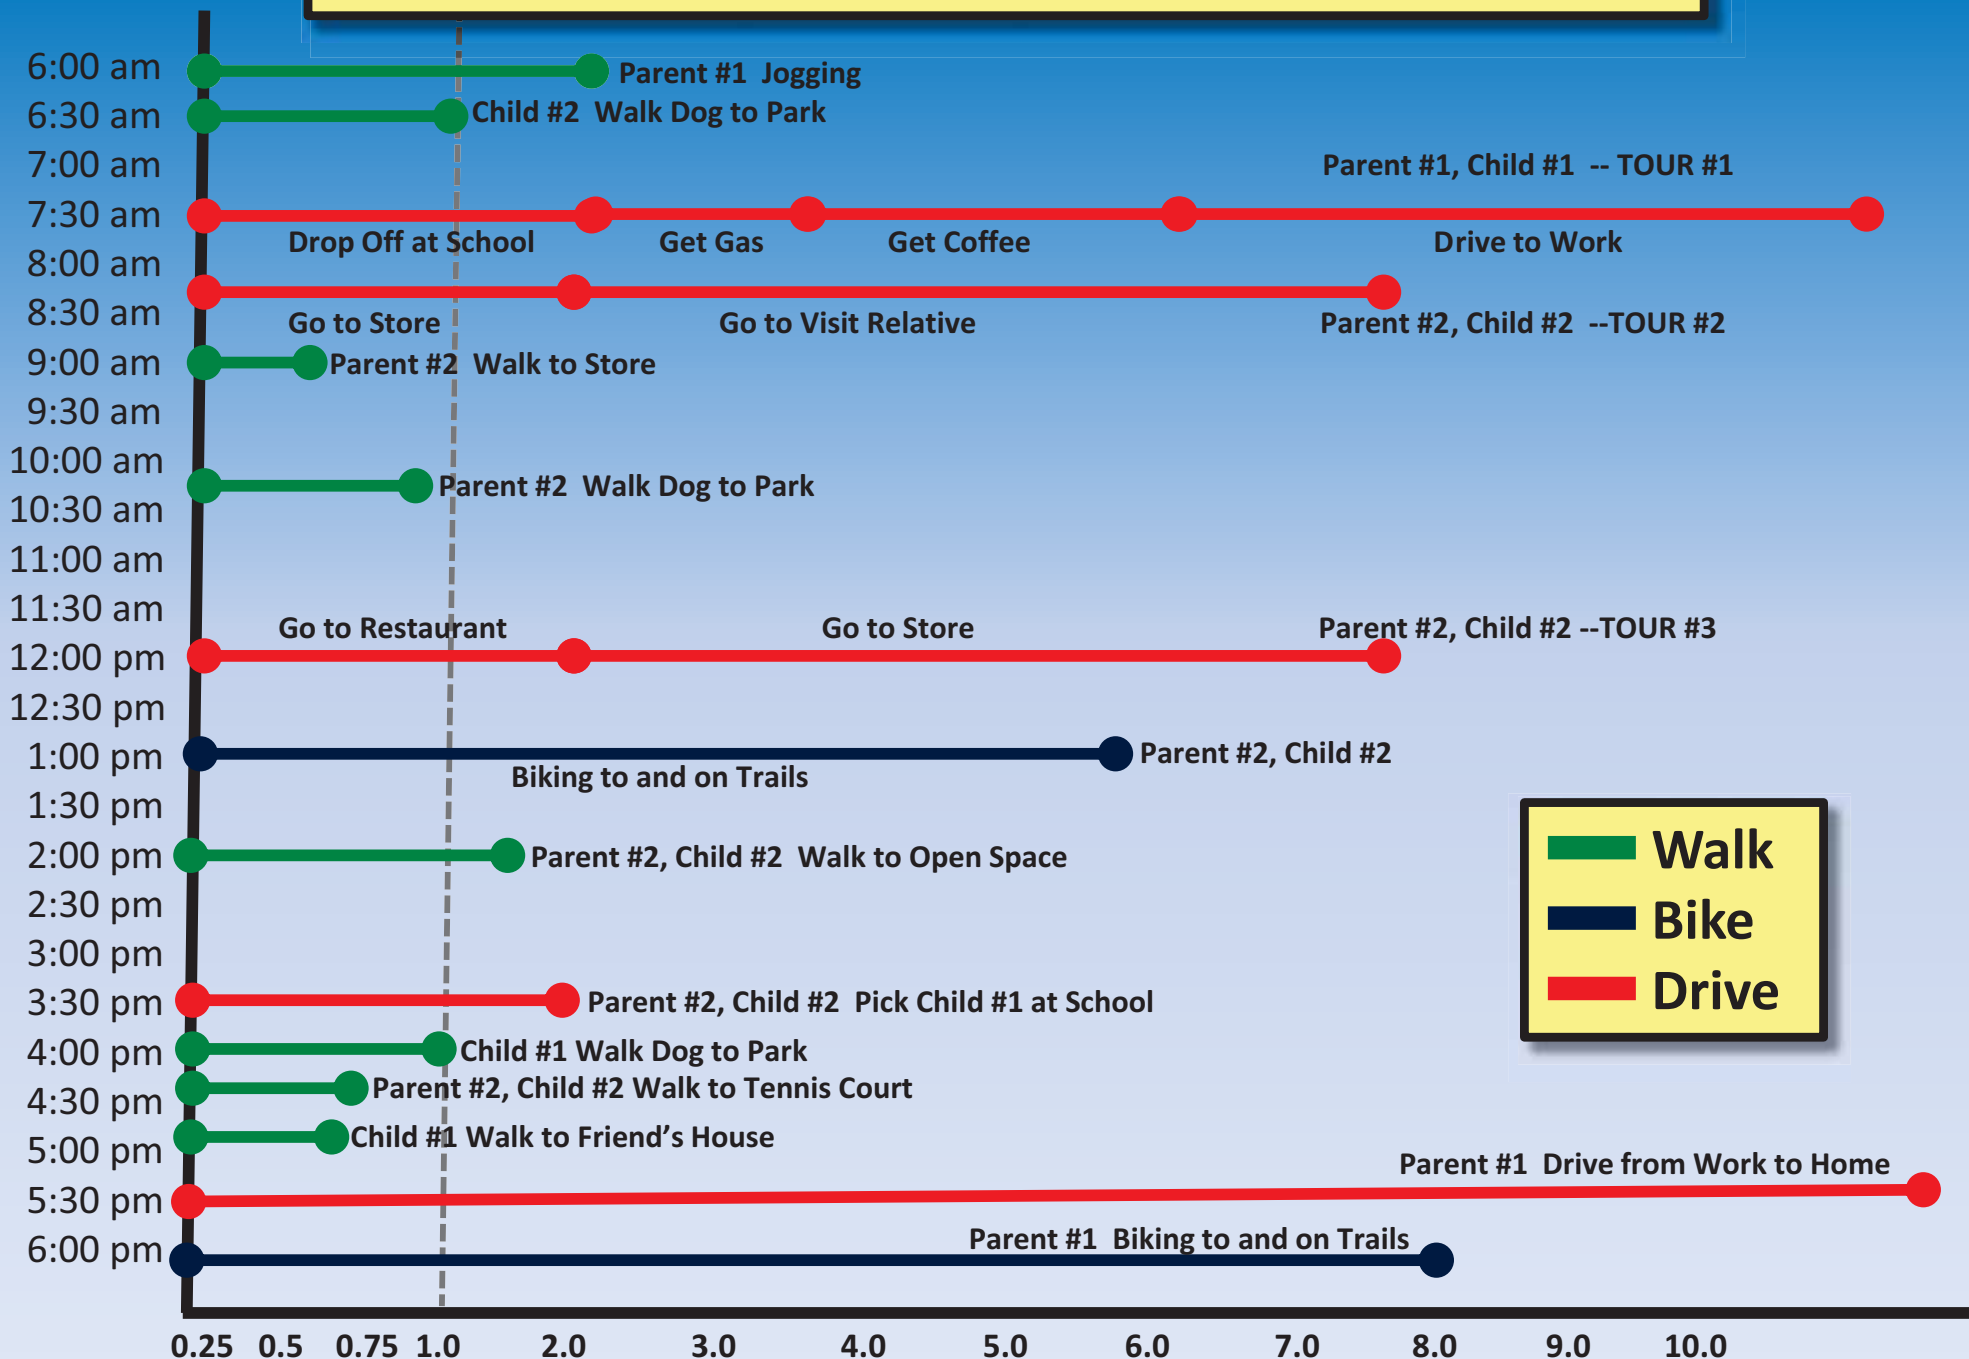

ATT 6: If SIDEWALKS AND/OR TRAILS WERE AVAILABLE for Your Trips, Would This Change How Far You Would Be Willing to WALK or BIKE ?

	DELAWARE	New Castle	Kent	Sussex
YES	49%	45%	51%	52%
NO	51%	55%	49%	48%

# Typical Activity / Travel Patterns by Time of Day, Household Member, Trip Purpose, Trip Distance

# Typical Activity / Travel Patterns by Time of Day, Household Member, Trip Purpose, Trip Distance

**Elements of Accessibility:**

**“Frequency”  
(Land Use)**

*Number of Opportunities*

**“Proximity”  
(Transportation)**

*Time / Distance*

Number of Stores within 10 minute WALK.

Number of Parks within 30 minute BIKE.

Number of Homes within 20 minutes WALK of Each Store.

Number of Jobs within 30 minute WALK of Each Home.

## INDEX Pedestrian Accessibility

Release 9.2*

### **User Notebook**

### INDEX Pedestrian Accessibility

Definition and Units:

Average percent of user-defined origins within 15-minute walk time to user-designated destination points, weighted by pedestrian trip generation and attraction capacity of origins and destinations.

Illustrative Scores:

Varies by study area and distribution of user-defined points.

General formula:

$$\frac{\sum_d \left( \frac{\sum_{aod} W_{aod}}{\sum_{iod} W_{iod}} * W_d \right)}{\sum_d W_d} * 100$$

Source: INDEX User's Guide, p. 71.

- $T_{od}$  = shortest network travel time in feet from origin point  $o$  to nearest destination point  $d$ .
- $W_{aod}$  = pedestrian accessibility weight for accessible origin point  $aod$ , where an origin point  $o$  is "accessible" if it has a  $T_{od} \leq 15$ .
- $W_{iod}$  = pedestrian accessibility weight for origin point  $iod$ , if  $iod$  is within  $\frac{1}{4} r$  linear distance in miles of destination point  $d$ , where  $r$  is the maximum walking speed in miles per hour.
- $W_d$  = pedestrian accessibility weight for destination point  $d$ .

## INDEX Pedestrian Accessibility

Path: Center-of-Road  
"Shortest Route"

Crosses Barrier

410 Feet

Path: Center-of-Road

Does Not Cross Barrier

1,240 Feet

Path: Sidewalks &  
Crosswalks

Does Not Cross Barrier

1,050 Feet
